KENYA MEDICAL TRAINING COLLEGE
FACULTY OF NURSING
DEPARTMENT OF NURSING

FINAL QUALIFYING EXAMINATION
FOR
DIPLOMA IN COMMUNITY HEALTH NURSING

PAPER: GENERAL PAPER

DATE: 25th JULY, 2024 **TIME: 3 HOURS (9:00 AM – 12 NOON)**

INSTRUCTIONS

1. This paper consists of:
   - Section 1 (40 Multiple Choice Questions)
   - Section 2 (8 Short Answer Questions)
   - Section 3 (1 Long Answer Question)
2. Attempt **ALL** Questions
3. ALL Multiple choice questions MUST be answered in **CAPITAL LETTERS**
4. Write your **EXAMINATION NUMBER** on all the answer sheets provided and on the question paper.
5. No other writing should be done on the question paper except your Examination Number.
6. Ensure that all examination answer scripts are handed in at the end of the examination
7. Ensure you sign the examination register provided

EXAMINATION NUMBER .....

GENERAL PAPER

SECTION 1: MULTIPLE CHOICE QUESTIONS **(40 MARKS)**

1. To admit a voluntary patient in a mental hospital the law requires that the relatives or guardian fill:
   A. MOH 638
   B. MOH 614
   C. MOH 613
   D. MOH 637
2. Betty had a shoe fetish that he wished to overcome. His therapist had him view slides of shoes while giving him mild electric shocks. This is an example of:
   A. Systematic desensitization
   B. Orgasmic reorientation
   C. Aversion therapy
   D. Electroconvulsive Shock Therapy (ECT)
3. Psychosis is a severe mental condition characterized by significant
   A. Loss of touch with reality
   B. Prolonged emotional reaction to stress
   C. Anxiety, fear, vague aches and pain
   D. Personality disintegration
4. Social therapy in mental illness is crucial for several reasonsthat include:
   A. Treatment of psychosis
   B. Rehabilitation of mentally ill persons
   C. Maintenance of community health
   D. Prevention of addiction.
5. Cynophobia is a specific phobia characterized by an intense and irrational fear which can manifest as anxiety, panic attacks, avoidance behavior, or even extreme reactions such as freezing or screaming when encountering or even thinking about:
   A. Dogs
   B. Cats
   C. Mice
   D. Darkness
6. impaired consciousness, visual hallucinations, hyperactivity, and fragmentary delusions—suggest a possible condition known as :
   a) Dementia
   b) Delirium
   c) Paranoid psychosis
   d) Schizophrenia

The commonest cause of mental retardation, also known as intellectual disability, is
   A. Alkaptonuria
   B. Kluver-Bucy syndrome
   C. Korsakoffs syndrome
   D. Birth asphyxia.

7. KorKorsakoff's syndrome typically occurs in
   A. Hospitalized psychopaths
   B. Prisoners waiting trial
   C. Avitaminosis in alcoholics
   D. Depressed prisoners.

For number 8 and 9 match the statement in column A with the statements in column B

COLOUMN A	COLOUMN B
8. i) Delusions of grandeur ii) Feeling no joy or pleasure from life or any activities or relationship 9. i) auditory hallucinations ii) thought broadcasting	a) Schizophrenia b) Flat affect c) Lack of volition d) Mania e) Ambivalence f) Anhedonia g) Alcoholism

10. All children with a confirmed diagnosis of HIV (Human Immunodeficiency Virus) should have Highly Active Antiretroviral Therapy (HAART) initiated
    A. When the CD4 count are below 350 mm/cc
    B. If the child is in third clinical stage of HIV
    C. Irrespective of CD4 count or clinical staging
    D. If the child has opportunistic infections
11. The diet of a patient suffering from acute glomerulonephritis typically focuses on managing symptoms and reducing stress on the kidneys.their diet of would consist of:
    A. High protein, salt free, restricted fluids
    B. Low protein, salt free, restricted fluids
    C. High carbohydrates, high protein, plenty of fluids
    D. Low carbohydrates, high protein, plenty of fluids
12. The developmental stage when a child can say several words or even make some sentence is:
    A. 9-12 months
    B. 12-18 months
    C. 2 years
    D. 3 years
13. A child with pain and pus draining from the ear reported for less than 14 day is classifies as having:
    A. Acute otitis media
    B. Mastoiditis
    C. Chronic otitis media
    D. Adenotitis
14. Cleft lip and palate are more common to:
    A. Dizygotic twins than in monozygotic twins
    B. Triplets than in a monozygotic twin
    C. Monozygotic twins than in a dizygotic twin
    D. Triplets than in a dizygotic twin
15. General emergency signs in children include:
    A. Not able to drink or breastfeed, pain, oedema of both feet
    B. Vomits everything, mouth ulcers, pain
    C. Unconscious, oedema of both feet, pus drawing from the ear
    D. Not able to drink or breastfeed, vomits everything, unconscious

16. The most precise measurement scale of variable is:
    A. Ordinal scale
    B. Interval scale
    C. Ratio measurement scale
    D. Nominal scale
17. Examples of probability sampling techniques include:
    A. Simple random, systemic random, snow ball sampling.
    B. Cluster random, stratified, quota sampling.
    C. Convenient sampling, simple random, snow ball sampling.
    D. Cluster random, stratified random, systemic random sampling.
18. Validity of a measurement tool in research refers to
    A. Extent to which a measurement tool measures what it is supposed to measure.
    B. Extent to which the measurement tool measure correctly.
    C. Extent to which the measurement tool can measure all variables.
    D. Extent to which the measurements tool can produce the same results if used several times.
19. An innovative method that is used in participatory research in which both the researcher and participants collaborate and learn from each other is known as:
    A. action research
    B. rapid rural appraisal
    C. participant observation
    D. observations
20. The main characteristics of experimental research are;
    A. Collaboration, randomization
    B. Participation, control
    C. Innovation, participation
    D. Manipulation, control
21. The following are measures of dispersion
    A. Mean, standard deviation, median
    B. Mean, mode, median
    C. Range, standard deviation, variance
    D. Range, mean, median
22. The type of statistics in which a researcher can generalize the results of a sample to the whole population is:
    a) Probability statistics
    b) Descriptive statistics
    c) Competitive statistics
    d) Inferential statistics
23. An example of a qualitative variable is:
    A. Sex
    B. Weight
    C. Height
    D. Blood pressure

24. A research methodology that yields the strongest evidence for causality is:
    A. Correlational
    B. Experimental
    C. Causal comparative
    D. Ethnography
25. In a research report, the appendices include:
    A. Interview guide, work plan, bibliography
    B. Questionnaire, references, time schedule
    C. Consent form, research budget, study area map
    D. Study area map, references, focused group discussion guide
26. A lecturer intends to use a variety of teaching aids during a group therapy session to diabetic patients; the correct order to follow in the use of the teaching aids is
    A. Plan, select, present, evaluate, preview
    B. Plan, select, preview, present, evaluate
    C. Select, plan, present, preview, evaluate
    D. Select, preview, plan, present, evaluate
27. An educational objective must meet one of the key criteria below;
    A. Teacher's performance
    B. The venue of instruction
    C. Learners wishes and interest
    D. Learner's performance
28. Projected teaching aid include
    A. Hand out
    B. Poster
    C. Liquid Crystal Display (LCD)
    D. Model
29. Attitude of nursing learners can best be assessed;
    A. Indirectly during a skill
    B. By use of written examination
    C. At only one point in time
    D. By peer evaluation
30. According to Abraham Maslow's;
    A. Environmental factors are the key determinants of learning
    B. New knowledge is anchored on what is already known
    C. Learner gains new knowledge by connecting symbols
    D. The basic needs of an individual must be met first for learning to occur
31. During curriculum development Mai College utilized a specialist to develop the content and learning experiences for KRCHN learners, this approach is described as:
    A. Task based
    B. Teacher centered
    C. Competency based
    D. Learner centered
32. The domain of learning concerned with skill acquisition and performance is
    A. Psychomotor
    B. Affective
    C. Knowledge
    D. Performance

Scanned with ACE Scanner

33. The key advantage of a nursing conference as a method of clinical teaching is
    A. Students can share experiences and information online
    B. It is multidisciplinary thus wide experience is shared
    C. The teacher is the center of focus thus presentation is scholarly
    D. Students are able to learn hands on and participate actively

For numbers 35 and 36 Indicate whether the following statements are True (T) or False (F)

34.
    A. Role play makes use of drama, activities and responsibilities associated with certain cadres in order to enhance learning about those responsibilities
    B. Simulation allows learners to make mistakes in a simulated situation which would otherwise be harmful to a patient

35.
    A. Adult learners enrich their learning through life experiences
    B. Team teaching is an excellent method of utilizing human resource capital teaching

36. Which of the following statements best describes chest indrawing?
    A. Inward movement of the lower chest during inspiration
    B. Inward movement of the lower chest during expiration
    C. Any intercostal retractions during inspiration
    D. Upper intercostal retractions during expiration
37. How do you classify a 4-day-old newborn who has yellow palms and soles?
    A. Severe jaundice
    B. Jaundice
    C. No jaundice
    D. Mild jaundice
38. Which of the following signs must a child have to be classified as having MASTOIDITIS?
    A. Redness behind the ear
    B. Swelling behind the ear
    C. Pus draining from one of the ears
    D. Tender swelling behind the ear
39. How much ORS should be given to a 12-month-old child with acute diarrhea with SOME DEHYDRATION weighing 11 kg?
    A. As much as the child wants
    B. 50 ml of ORS after each loose stool
    C. 200 ml of ORS after each loose stool
    D. 700 – 900 ml over 4 hours

SECTION 2: SHORT ANSWER QUESTIONS (40 MARKS)

41. Delirium and dementia are both conditions that affect cognitive function. State four (5) differences of delirium and dementia (5 marks)
42. Endogenous depression, also known as melancholic depression, is characterized by specific clinical manifestations that distinguish it from other types of depression. Explain three (3) clinical manifestations of endogenous depression (6 marks)
43. In the Integrated Management of Childhood Illness (IMCI) guidelines, the management of diarrhea in children involves a systematic approach to ensure effective treatment and prevention of dehydration. Outline four (4) rules of the management of diarrhea using plan A in IMCI (4 marks)
44. In the context of the Integrated Management of Childhood Illness (IMCI), the "Triangle" refers to a systematic approach for assessing sick children based on three main signs:Outline any five (5) priority signs during triangle. (5 marks)
45. Adult learning is based on principles that recognize the unique characteristics and needs of adult learners. Explain three (3)principles of adult learning (6 marks)
46. Sigmund Freud, the founder of psychoanalysis, proposed a structural model of personality that consists of three main components. State the three (3) components: (3 marks)
47. Ensuring the quality of data during the data collection process is essential to maintain accuracy, reliability, and validity of the findings. Explain three (3) measures you would take to ensure quality of data during the data collection process. (6 marks)
48. Stratified random sampling is a method used to ensure that the sample drawn from a population represents different subgroups or strata within that population in proportion to their presence in the population. State four (4) steps you would follow when using stratified random sampling method. (5 marks)

SECTION 3: LONG ANSWER QUESTION (20 MARKS)

49. Hypoplastic anaemia is a condition characterized by a deficiency of all types of blood cells due to failure of bone marrow production. You are allocated to nurse Master Lokikik aged 8 years who is admitted in the ward with the condition. You utilize the nursing process to plan his care. Describe his priority needs and the specific nursing care you would provide to him until discharge (20 marks)
