KENYA MEDICAL TRAINING COLLEGE
FACULTY OF MEDICAL EDUCATION AND INFORMATION SCIENCES
DEPARTMENT OF HEALTH RECORDS AND INFORMATION

FINAL QUALIFYING EXAMINATION
FOR
DIPLOMA IN HEALTH RECORDS AND INFORMATION TECHNOLOGY

PAPER: COMPUTER APPLICATION IN HEALTHCARE

DATE: 5th JULY, 2023	**TIME: 3 HOURS (8:00AM – 11:00AM)**

INSTRUCTIONS

1. This paper consists of:
   - Section 1 (40 Multiple Choice Questions)
   - Section 2 (8 Short Answer Questions)
   - Section 3 (1 Long Answer Question)
2. Attempt **ALL** Questions
3. ALL Multiple choice questions MUST be answered in **CAPITAL LETTERS**
4. Write your **EXAMINATION NUMBER** on all the answer sheets provided and on the question paper.
5. No other writing should be done on the question paper except your Examination Number.
6. Ensure that all examination answer scripts are handed in at the end of the examination
7. Ensure you sign the examination register provided

EXAMINATION NUMBER .....

COMPUTER APLLICATION PRACTICAL (DCAPA)

SECTION 1

1. Create a folder on the Desktop with your three-digit exam number as your identity(2 marks)
2. Type the text below as it is on introduction to Postmortem (7 marks)
3. Save the typed text in your folder as INTROMORTEM…. with exam number prefix (2 marks)

INTRODUCTION TO POST-MORTEM

A post-mortem examination, also known as an autopsy, is the examination of a body after death. The aim of a post-mortem is to determine the cause of death. Post-mortems are carried out by pathologists. Post-mortems provide useful information about how, when and why someone died. They enable pathologists to obtain a better understanding of how diseases spread. A post-mortem examination will be carried out if it has been requested by a coroner – because the cause of death is unknown, or following a sudden, violent or unexpected death. Or a hospital doctor – to find out more about an illness or the cause of death, or to further medical research and understanding. There are two different types of post-mortem.

i. Coroner's post-mortem examination

A coroner is a judicial officer responsible for investigating deaths in certain situations. The main aim of a post-mortem requested by a coroner is to find out how someone died and decide whether an inquest is needed.

ii. Hospital post-mortem examination

These post-mortems are requested by hospital doctors to provide more information about an illness or the cause of death, or to further medical research.

In conclusion after a post- mortem, the pathologist writes a report of the findings. If the post-mortem was requested by the coroner, the coroner or coroner's officer will let you know the cause of death determined by the pathologist. If you want a full copy of the pathologist's report, you can request this from the coroner's office, but there may be a fee.

4. Insert a page break below the typed text to create page 2 (1 mark)
5. Copy all the text and paste on the inserted page (2 marks)
6. Apply double spacing to the text (2 marks)
7. Convert the introduction paragraph into two columns with a line between them (2 marks)
8. Apply the outline mode as follows: (2 marks)
   a) Introduction to postmortem title update to **level** 1
   b) The two (i & ii) types of postmortem updated to level 2
9. Save the work into your folder as REPOSTEM – with your number prefixed (2 marks)

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

SECTION 2

The following Health Data was collected during May 2023 from ten counties on Monthly Malaria Parasites Samples collection

County	Rural	Urban
Bungoma	54	85
Uasin Gishu	41	77
Narok	46	78
Machakos	58	84
Makueni	11	72
Kwale	67	88
Kilifi	61	79
Tana River	68	92
Nyeri	63	92
Meru	93	98

1. Type the data starting at cell A3 as it is and ensure boarders are on the data (4 marks)
2. Save as COUNTYMPS…… with your exam number prefix (1 mark)
3. Ensure you have three worksheets then Copy the typed data and paste into two work sheets with each data entry maintaining their cells (2 marks)
   Rename the worksheets as – Original data-Sort data and Basic Analysis (2 marks)
4. On the *Original sheet* at cell A1 type the title of the data as- May 2023 County MPS Data and merge to cell E1 likewise Merge Cell A2 and A3 (2marks)
5. Format the contents of Row 2 to bold with a background fill colour of blue (2 marks)
6. On the *Sort sheet,* establish total specimen in each county, rural and urban (4 marks)
7. Sort Using the county total column in a descending order (2 marks)
8. On the *Basic Analysis Sheet,* establish the following for rural and urban (3 marks)
   a) Average
   b) Standard deviation
9. Draw a Pie chart showing reporting of the average of the rural and urban placing it in the same sheet (3 marks)
10. Protect your Worksheet and enter the Password used in the Protection here…….. (2 marks)

SECTION 3

Open Microsoft power point and make a presentation using the information on the postmortem report and Health Data Collection on MPS described above as follows:

1. Create a title slide whose main title is: *Introduction to Postmortem and County MPS Data* with subset of your Examination number as identity of presenter and presentation date of today (3 marks)

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

2. Then insert two slides of title and content type with their content as follows;
   a) The title being *Types of postmortem* then text roman number as below; (3 marks)
      i. Coroner's post-mortem examination
      ii. Hospital post-mortem examination
   b) The title as MPS Basic statistics and text bulleted as; (3 marks)
      - Average of------
      - Standard deviation of -------
3. Then insert slide 4 of the title only slide type and copy the chart from section two above and paste, format to fit suitably on the slide (3 marks)
4. Apply the organic theme on all slides and format their titles to font 60, bold maroon (3 marks)
5. Animate all slides to Fly in from left direction with 2 minutes delay (3 marks)
6. Save your presentation as CONTHEDU……. with your exam number prefix (2 marks)

SECTION 4

1. Open Microsoft access and create a data base named as ***Research Data 2023*** hosted in your folder as created. (4 marks)
2. Create a table named as registered samples with the field as below making the county as primary key (4 marks)
3. Enter the data as indicated on the table below as it is (10 marks)

County	Surname	Other Name	Age	Sex	Specimen	Results
Bungoma	Nekesa	Winny	32	Female	MPS	Positive
Uasin Gishu	Kirui	Daniel	23	Male	MPS	Negative
Narok	Sentau	Ben	18	Male	MPS	Negative
Machakos	Muli	Joseph	45	Male	MPS	Negative
Makueni	Mueni	Mary	14	Female	MPS	Positive
Kwale	Waridi	Hamadi	6	Male	MPS	Positive
Kilifi	Kazo	Mwanaida	7	Female	MPS	Positive
Tana River	Mwamuye	Jane	27	Female	MPS	Negative
Nyeri	Kamau	Joseph	35	Male	MPS	Negative
Meru	Mwale	Mercy	4	Female	MPS	Negative

4. Import the excel *Original Data Sheet* and make the county as primary key (5 marks)
5. Create a Query to determine the following
   a) Total negatives and positives Result MPS basis sex
   b) Total positives and negatives among those aged 15 years and above (adults) (4 marks)
6. Create a report for your query above titled *MPS RESEARCH REPORT 2023* and write one introduction sentence narration interpreting your query report (3 marks)
7. Save all the changes, check your work, close all your files, Compress/zip your folder and shutdown your computer (3 marks)
