ALIMENTARY, BILIARY AND DENTAL NURSING SET 1

SECTION I: MULTIPLE CHOICE QUESTIONS (20 MARKS)

1. End stage of chronic liver disease is referred to as
   A. Cirrhosis
   B. Alcoholic hepatitis
   C. Steatosis
   D. Necrosis
2. The diets that pose a risk of developing gastric cancer include
   A. Vegetables, spiced meat
   B. Excessive meat, excessive vegetables
   C. Salted fish, spiced meat
   D. Legumes, salted fish
3. The region of the GIT where ulcers are common is
   A. Jejunum
   B. Duodenum
   C. Ileum
   D. Caecum
4. The nurse is caring for a client with cirrhosis of the liver, which has developed esophageal varices. The nurse understands that the best explanation for the development of esophageal varices is
   A. Chronic low serum protein levels result in inadequate tissue repair, allowing the esophageal wall to weaken.
   B. The enlarged liver presses on the diaphragm, which in turn presses on the esophageal wall, causing the collapse of blood vessels into the esophageal lumen.
   C. Increased portal pressure causes some of the blood that normally circulates through the liver to be shunted to the esophageal vessels, increasing their pressure and causing varicosities.
   D. The enlarged liver displaces the esophagus toward the left, tearing the muscle layer of the esophageal blood vessels, which allows small aneurysms to form along the lower esophageal vessels.
5. A hiatus hernia involves:
   A. Extension of the esophagus through the diaphragm.
   B. Narrowing of the esophagus which causes a stricture.
   C. Protrusion of the upper stomach into the lower portion of the thorax.
   D. Twisting of the duodenum through an opening in the stomach.
6. The cardinal objective sign of gingivitis is:
   A. Increase in the size of the gingiva
   B. Increase in fluid surrounding the gingiva
   C. Increase in redness around the gingiva
   D. Bleeding on probing the gingiva

7. An inflammatory disease of the large intestine that affects the mucosal layer beginning in the rectum and colon spreading to adjacent tissue is
   A. Paralytic ileus
   B. Peptic ulcer disease
   C. Ulcerative colitis
   D. Peritonitis
8. A hospitalized patient with Gastro-oesophageal reflux disease (GERD) is complaining of a heartburn following a meal. A nurse administers antacid and advices the patient to lie in the following position.
   A. On the stomach with the head flat
   B. Supine with the head of the bed flat
   C. Side lying with the head of the flat
   D. Supine with the head of the bed raised
9. You're educating a group of patients at an outpatient clinic about peptic ulcer formation. The statement that describes how peptic ulcers form is
   A. "An increase in gastric acid is the sole cause of peptic ulcer formation."
   B. "Peptic ulcers can form when acid penetrates unprotected stomach mucosa. This causes histamine to be released which signals to the parietal cells to release more hydrochloric acid which erodes the stomach lining further."
   C. "Peptic ulcers form when acid penetrates unprotected stomach mucosa. This causes pepsin to be released which signals to the parietal cells to release more pepsinogen which erodes the stomach lining further."
   D. "The release of prostaglandins cause the stomach lining to breakdown which allows ulcers to form."
10. A 23-year-old patient is admitted with suspected appendicitis. He states that he is having pain around the umbilicus and points to his abdomen at a location which is about a one-third distance between the anterior superior iliac spine and umbilicus. This area is known as:
   A. Rovsing's Point
   B. Hamman's Point
   C. McBurney's Point
   D. Murphy's Point
11. A 51-year-old woman, is diagnosed with cholecystitis. Which diet, when selected by the client, indicates that the nurse's teaching has been successful:
   A. Low-fat, low carbohydrate meals
   B. High-fat, high-carbohydrate meals
   C. Low-fat, high-carbohydrate meals
   D. High-fat, low protein meals

12. When planning home care for a client with hepatitis A, the preventive measure that should be emphasized to protect the client's family is
    A. Keeping the client in complete isolation
    B. Using good sanitation with dishes and shared bathrooms
    C. Avoiding contact with blood-soiled clothing or dressing
    D. Forbidding the sharing of needles or syringes
13. Master P who is diagnosed with acute pancreatitis, is under the care of Nurse B. Which intervention should the nurse include in the care plan for the client?
    A. Administration of vasopressin and insertion of a balloon tamponade
    B. Preparation for a paracentesis and administration of diuretics
    C. Maintenance of nothing-by-mouth status and insertion of nasogastric (NG) tube.
    D. Dietary plan of a low-fat diet and increased fluid intake to 2,000 ml/day
14. **For question 14, indicate whether the statements are true or false:**
    A. Food relieves the pain in Duodenal Ulcers
    B. Food aggravates the pain in Gastric Ulcers
15. The linings of the stomach involved in a complicated chronic ulceration include:
    A. The outer layer, the muscles, mucosal lining
    B. The middle muscles, mucosal lining, rugae
    C. The mucosal lining, rugae, outer layer
    D. The rugae, the middle muscles, outer layer
16. Common stool Test for diagnosing bleeding gastrointestinal disorders is
    A. Fecal occult blood testing
    B. Full hemogram
    C. Prothrobin time
    D. Stool for ova and cyst
17. A hard, rocky coating on the tooth near the gums that forms when old plaque mixes with calcium in the spit/saliva is known as:
    A. Plaque
    B. Coat
    C. Enamel
    D. Tartar
18. Pyloroplasty refers to
    A. Partial removal of stomach
    B. Reconstruction surgery of enlargement of pylorus
    C. Denervation of vagus nerve
    D. Removal of pylorus
19. One of the following is a characteristic feature of Crohns disease
    A. Patient has generalized body oedema
    B. The diseased portions are discontinuous with segment of normal bowel occurring between them
    C. Patient does not present with abdominal pain due to poor blood supply to the GIT
    D. The inflammation affects only the superficial mucosa only.

20. Buildup of bile salts may cause the systemic symptoms of
   A. Ulticaria
   B. Hypotension
   C. Pruritis
   D. Ecchymosis

SECTION II: SHORT ANSWER QUESTIONS (40 MARKS)

21. State five (5) signs and symptoms of periodontitis. **5 marks**
22. Explain three (3) classifications of haemorrhoids. **6 marks**
23. State five (5) ways in which dental abscess can be prevented. **5 marks**
24. State five (5) common symptoms of hepatocellular jaundice. **5 marks**
25. Outline specific management of a patient post appendicectomy. **5 marks**
26. Outline five (5) predisposing factors to colorectal cancers. **5 marks**
27. State five (5) actual Nursing diagnoses for a patient with Cancer of the oesophagus. **5 marks**
28. Outline four (4) functions of the pancreas. **4 marks**

SECTION III: LONG ANSWER QUESTIONS (40 MARKS)

29. Master P. presents at the outpatient department with complains of severe abdominal pain with projectile vomiting. On examination, the abdomen is severely distended. Based on the symptoms a diagnosis of intestinal obstruction is made. Describe the pathophysiology of small bowel obstruction, state four (4) causes of intestinal obstruction and describe the nursing and medical management of small bowel obstruction. **20 marks**

30. Mr. Y who is 53yrs old has been admitted in the medical ward with a diagnosis of liver Cirrhosis. Draw and label a diagram of the biliary tract, state four (4) types of liver cirrhosis and describe Mr. Y's nursing and medical management from admission till discharge. **20 marks**
