PREFACE

We must admit that this is a dream come true. It is a truly daring act to resolve to pursue this mission. We are sure that the energy and enthusiasm currently burning in us at this point of consolidating our efforts to bring up the department of health records and information will not expire any soon. Surely, there is no better time than now.

This curriculum was developed to steer professionalism among the health records and information students through instilling knowledge and skills required in the present, dynamic world today. It is also geared towards reengineering and sharing vast experience in the field of health records and Information management.

Albert Einstein asserted that “Education is what you learn after you have forgotten everything you learnt in school” It is our hope that this guide will help in meeting all expectations of diverse, potential and future employers through sufficient exposure of the students to different orientations in health records and information management.

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

VISION AND MISSION

VISION STATEMENT;

To be the leading preferred medical training institution that offers internationally recognized high quality education in our region.

MISSION STATEMENT;

To provide high quality education to our students by developing a suitable combination of skills, knowledge and attitude to enable them meet challenges posed by globalization.

MEMBERS OF THE TSMHS DHRIT CURRICULUM REVIEW WORKING GROUP

1. **DARIAH NEKESA - A.M.R.O**
2. **MERCY MUNANIE - A.M.R.O**
3. **STEPHEN MWANGI - H.O.D**
4. **GEOFREY GICHURE - H.O.D**
5. **VALENTINE OKUMU**

ENTRY REQUIREMENTS;

The minimum entry requirements for a Diploma in Health Records and Information Technology shall be;

Pre-Service (Direct Entry):

At (**KCSE**) Kenya Certificate of Secondary Education (**8-4-4 System**) level:

The candidate must have a mean Grade of **C plain** with **C-** in Mathematics and English or Kiswahili and C- in Biology or chemistry.

In-Service Entry:

This applies to those officers already in the service. He/she must have:

a. A minimum of Division III at KCE level or its equivalent in the KCSE (8-4-4 system)

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

b. A certificate in Health Records and Information Technology (Technician)

ROLES AND RESPONSIBILITIES

1. Establish, organize, and manage health information systems
2. Plan, supervise, and co-ordinate work in health records services
3. Organize and manage health records and information services
4. Conduct research services
5. Conduct monitoring and evaluation (M&E) of health records services
6. Participate in health and related project management
7. Establish, organize and manage health records and archive operations
8. Data processing and dissemination of information
9. Apply ICT in health records and health data management
10. Apply anatomy, physiology, pathology and terminology in classifying , coding and indexing of disease and procedures in medicine
11. Store and retrieve health records
12. Manage departmental resources (both human and non-human)
13. Management of disease surveillance and response system
14. Participate in the national organization of health service delivery system
15. Management of departmental supplies

COURSE OUTCOMES

Upon completion of the three year DHRIT programme, the graduate is expected to exhibit the following units of competence where each unit of competence has the prescribed areas of competence:

1. Maintain and practice professionalism in the workplace
2. Establish a Health record Department in a health care facility
3. Apply leadership skills
4. Acquire leadership skills
5. Communicate effectively with the patients, colleagues, and the public
6. Solve departmental and professional problems
7. Manage health records and information department personnel
8. Exercise professional integration
9. Manage a disaster

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

10. Design, organize, manage, and evaluate health information systems
11. Participate in planning and organization of national health services in relation to information flow
12. Participate in the provision of community health in relation to health information
13. Practice professional ethics ad medico-legal aspects of health records and information
14. Organize and manage the reception, registration, and initiation of records
15. Organize and manage appointment systems
16. Organize and manage clinic preparation
17. Organize and manage patients ADT systems
18. Manage and maintain health records storage, retrieval, and control
19. Manage other types of records
20. Organize and manage a health records and information office
21. Apply research methods in conduction research
22. Process and analyze data
23. Utilize computer applications in research, data analysis, and presentation
24. Conduct epidemiological studies
25. Collect, compute and interpret demographic data

HANDLING OF SPECIAL AND SUPPLEMENTARY EXAMINATIONS

In this curriculum, the handling of special and supplementary examinations will be based on TSMHS examination policy.

FACILITIES AND EQUIPMENT

1. Due to the current Technological Changes, a computer-equipped laboratory is required with the latest software. Each student to have her/his computer to facilitate the acquisition of the required competencies
2. 1 Laptop and 1 data projector
3. 1 whiteboard

PROGRAMMES OFFERED BY THE INSTITUTION AND DURATION

The current programmes offered are:

a) Diploma pre-service in Health Records and Information Technology
b) In-service Diploma in Health Records and Information Technology
c) Certificate in Health Records and Information Technology

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

CURRICULUM ORGANIZATION

This curriculum will be implemented on modular based system. It reflects the arrangement of modules in terms of what is to be taught at a specified period as well as the underlying units of competencies after each module. In addition, the assessment approaches are reflected in each unit of competence.

MODULES TO BE COVERED	MODULE CODE
1. Health Records Management	DHRI 01
2. Health Statistics	DHRI 02
3. Human Anatomy and Physiology	DHRI 03
4. Human Pathology	DHRI 04
5. Health Data Classification	DHRI 05
6. Medical Terminology	DHRI 06
7. Health Information System	DHRI 07
8. Computer Applications	DHRI 08
9. Community Health	DHRI 09
10. Health Services Management	DHRI 10
11. Epidemiology	DHRI 11
12. Demography	DHRI 12
13. Research Methodology	DHRI 13
14. Human Psychology	DHRI 14
15. Monitoring and Evaluation	DHRI 15
16. Communication Skills	DHRI 16
17. Entrepreneurship	DHRI 17
18. First Aid	DHRI 18
19. Management	DHRI 19
20. Customer care and Quality assurance	DHRI 20

ASSESSMENT:

Evaluation of students is by Continuous Assessment tests both in theory and practical and written examination at the end of each semester. A student must pass in all subjects so as to be awarded with a Diploma in Health Records & Information Technology

EXAMINATIONS

END OF TRIMESTER EXAMS
CAT – 40%
END TRIMESTER- 60%
TOTAL - 100%

FINAL QUALIFYING EXAMINATION
Upon completion of all the units and practicums the student will be required to sit for a Final Qualifying Exam.

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

MODULE TITLE: HEALTH RECORDS MANAGEMENT

TIME: 240 HOURS **24 CREDITS**

MODULE COMPETENCE

This module is designed to equip the learner with the knowledge, skills, and attitudes to effectively and efficient manage health records.

UNIT 1 Introduction to Health Records Management

UNTI 2 Receiving, Registration and Initiation of Health Records

UNIT 3 Creating and Maintaining Health Records Indices

UNIT 4 Scheduling and Follow-Up, Preparing of In/Out Clinic, Patients

UNIT 5 Admitting and Discharging Patients/Clients

UNIT 6 Storage and Retrieval of Health Records

UNIT 7 Acquiring and Maintain Health Records Equipment

UNIT 8 Legal Aspects of Health Records

UNIT 9 Managing Special Records

UNIT 10 Managing a Health Records And Information Office

UNIT 11 Establishing a Health Records Department in a Health Care Facility

UNIT 12 Developing and Designing Health Records Forms

UNIT 13 Ensuring Quality Assurance in Health Care Services

UNIT 14 Introductions to Electronic Health Records

MODULE OUTCOMES

At the end of the module the learner will be able to:

1. Give an overview of the health records discipline and its organization
2. Describe the procedures used in reception, registration and initiation of patient/client records
3. Describe the appointment systems
4. Describe the various methods of creating and maintaining health records indices
5. Display ability to create and maintain health records
6. Explain the various procedures of clinic preparation
7. Describe the admission and discharge procedures

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

8. Maintain the efficient system of storage, retrieval and control of health records
9. Explain the various system of storage and retrieval of heath records
10. Describe different methods of acquiring and maintaining health records equipment, health records forms, and office stationery
11. Demonstrate ability to acquire health record forms and equipment and office stationery and supplies
12. Describe legal aspects of health records
13. Enumerate the various notifiable diseases
14. Describe various types of special records
15. Describe how to establish a health records department
16. Educate the community and other health workers on the importance of health records
17. Describe how to design and develop health record forms
18. Appreciate the importance of quality assurance in health care
19. Display thoroughness and efficiency in managing health records
20. Appreciate the importance of confidentiality in dealing with health records
21. Definition of electronic health records and electronic medical records system
22. Explain the concept of electronic health records system

MODULE CONTENT

UNIT CODE; DHR1101 - HEALTH RECORDS MANAGEMENT-I

Time: 40 hours

1: Introduction to Health Records Management

Definition of health records; brief historical background; uses and value; organization of a health records department; functions of a health records department; relationship between health records department and other health disciplines; qualities of a good health records officer; documents contained in a health record; health records ethics; duties and responsibilities of medical records technician.

2: Receiving, Registration and Initiation of Health Records

Procedures of receiving patients; decision-making and interviewing; qualities of a good receptionist in in/out patient and accidents and emergency units; procedure of registering patients; type of registration (centralized and decentralized); unit system (alphabetical, chronological, straight numerical); attendance card; master index; case record; classification of records; pre-registration procedure of document.

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

UNIT CODE: DHR1201 HEALTH RECORDS MANAGEMENT- II
Time: 40 hours

1: Creating and Maintaining Health Records Indices

Definition and description of various health records indices (patient master, inpatient waiting list, diagnostic and operations indices); importance of health records indices; various methods of filing indices; procedures of creating various types of health indices; identification details (record the details, sort the index, file the index, alphabetical, numerical); ways of maintaining health records indices and equipment used in storage (sorting file, file cabinet, strip index); trays; International Classification of Diseases (ICD); books; computers; microfilming

2: Scheduling and Follow-Up; Preparing Of In/Out Clinic, Patients

Definition of scheduling; concept of follow-up; purpose; types of appointment systems (centralized and decentralized appointment systems); various procedures of clinic preparation (new patient, re-attendances, ward discharges); tracing of the records to various destinations (completion of tracer cards, sorting of tracer cards, retrieval of the notes, review filing and editing procedures); verification of the completeness of the file; compilation of the records checklist form

UNIT CODE: DHR1301 HEALTH RECORDS MANAGEMENT - III
Time: 40 hours

1: Admitting and Discharging Patients/Clients

Admission procedures, normal emergency and waiting list admissions; collection and registration of identification particulars; initiation of the inpatient record; (bed bureau) discharge procedures; collection, compilation, analysis, dissemination, and verification of returns, editing of health records; coding and indexing procedures; registration of births and deaths; review appointment procedures (ward discharges); health records audit; symptoms of various conditions; review reception procedures; review relevant legal procedures for admission and discharge; relevant admission forms; review of government office routine

2: Storage and Retrieval Health Records

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Storage of medical records; filing systems (alphabetical, numerical, terminal digit, chronological, automation); filing procedures of health records; security of health records; tracing systems (definition, tracing procedures, common tracer cards, library tracer card, personal tracer card, other tracing systems

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

such as control registers); confidentiality of health records; review of editing procedures of health records; equipment required in storage and retrieval (cabinets, shelves, trolleys, kik tools/ladders, chairs, box files, tables, pigeon holes, computer, microfilm, etc); preservation of health records (retention period, workmen's compensation act, weeding, date ladder)

UNIT CODE: DHR2101 HEALTH RECORDS MANAGEMENT – IV

Time: 40 hours

1: Acquiring and Maintaining Health Records Equipment

Acquisition procedure; use of accountable forms; maintenance of inventories; types of health records (medical stationery, office equipment, office stationery); storage and control of health equipment and supply expendables; non-expendables; maintenance of health records equipment (repair, contracting for service of equipment)

2: Legal Aspects of Health Records

Concepts of professional ethics and legal aspects of medical records (confidentiality, security, ownership, retention, disclosure); higher duty; court cases; insurance claims; various acts: Public Health Act (list of notification diseases med 26: procedure of disposal of dead bodies, health and safety, notification of infectious diseases); Public Records Act (retention and disposal or records); Safety Radiation Act; Mental Health Act; admission and discharge procedures; Government Official Secrets Act (confidentiality); Civil Registration Act (procedures of notification of births and deaths); Workmen's Compensation Act (procedures of workman's compensation); Criminal Procedure Code (completion of P3 forms, post mortems, consent for operations, release of information (e.g., in post mortems)

UNIT CODE: DHR2301 HEALTH RECORDS MANAGEMENT - V

Time: 40 hours

1: Managing Special Records

Importance of special records; types of special records (psychiatric records, maternity records, radiological records, accident and emergency records, maternal and child health/family planning records, infectious diseases records); procedures for completion and management of special records; review, storage, and retrieval as pertaining to special records; confidentiality of special records, review

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

legal aspects of medical records; security and control procedures as relates to special records procedures.

2: Managing a Health Records and Information Office

Definition, purpose and functions of an office; location of an office; types of offices; advantages and disadvantages, requirement of an office, organization and management of an office

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

UNIT CODE; DHR3101 HEALTH RECORDS MANAGEMENT - VI

Time: 40 hours

1: Establishing a Health Records Department in a Health Care Facility

Needs assessment (demography, hospital workers, clients); procedures in establishing a health records department; review storage and retrieval of health records; organization of various the sections; review admission and discharge procedures; concept of teamwork; commissioning procedures for a health records department.

2: Developing and Designing Health Record Forms

Basic principles of form design; importance of form designs; standardization of forms; qualities of a good form; formatting of health records forms (layout/size); various health records forms used in health records departments; pre-testing of health records forms; reproduction process (using government process of reproduction/acquisition, private printers, health facility resources); costing of printing work; equipment needed for development and designing of health records forms; storage, control and retrieval of forms.

UNIT CODE: DHR3301 HEALTH RECORDS MANAGEMENT - VII

Time: 40 hours

1: Ensuring Quality Assurance in Health Care Services

Definition of quality assurance; importance of quality assurance; method of quality assurance in health care records; definition of health records auditing of health records (process)

2: Introduction to Electronic Health Records

Define Electronic Medical Records (EMR); role of EMR system; privacy and security of EMR; key EMR functional requirements in Kenya; demonstrate how an EMR is used to improve public health

DHR: 3301 General Records management

1. OVERVIEW OF RECORDS MANAGEMENT

- What are records?

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

-what is records management?

-why is records management important?

-legal issues that affect records management

2. RECORDS MANAGEMENT POLICY

-overview of records management policy

- Objective of records management policy

- Records management policy of the government

-records management responsibilities

3. RECORDKEEPING SYSTEM

- What is a record keeping system?

-purpose of record keeping system

- Characteristics of recordkeeping system

4. RECORDS MANAGEMENT PROCESSES AND CONTROL

- Records management lifecycle

-practices in records management process

(Records capture; access; registration;

Tracking; records classification; records disposal.

Records storage)

5. PROTECTING VITAL RECORDS

-what are vital records?

-responsibility of an organization in protecting vital records

- establishing a vital records protection program

6. MONITORING AND AUDITING

-practices in monitoring and evaluation

-importance of monitoring and evaluation of records

7. ELECTRONIC RECORDS MANAGEMENT

-overview of ERM

-importance of using ERM

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

-challenges of managing electronic records

-implementation issues of ERM

8. RECORDS RETENTION AND DISPOSITION SCHEDULE

-approved records retention and disposal schedules

-regular disposal of records

-transfer of records to other bodies

-documenting records management processes

TEACHING METHODOLOGY

1. Lecturers
2. Group discussions
3. Demonstration
4. Role play

ASSESSMENT METHODS

Theory paper examination (mid-semester, end-of-semester, and final qualifying examinations):

- Multiple choice questions
- Matching variable statements
- True of False answer questions
- Filling the blanks
- Essay questions

Practical examination

- OSPEs based on those in National, Provincial and District hospitals

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

02. MODULE TITLE: HEALTH STATISTICS

TIME: 220 HOURS **24 CREDITS**

MODULE COMPETENCE

To enable the learner to collect, compute, analyze, interpret ad disseminate data for better healthcare service delivery

UNITS		HOURS
UNIT 1	Introduction to Health Statistics and Research	40
UNIT 2	Data Presentation	20
UNIT 3	Standard Health Facility Administrative Statistics And Formulae	40
UNIT 4	Measures of Central Tendency and Dispersion & Probability Distributions	40
UNIT 5	Linear Algebra, Graphs and Functions	40
UNIT 6	Hypothesis Testing and Sampling	40

MODULE OUTCOMES

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

At the end of the module the learner will be able to:

1. Apply basic skills in health research methodology
2. Utilize basic statistical skills for evidence –based decision making
3. Present data using various methods
4. Analyze and process data using basis ICT skills

MODULE CONTENT

UNIT CODE: DHR1102 HEALTH STATISTICS I (40 HOURS)

INTRODUCTION TO HEALTH STATISTICS AND RESEARCH

- Definition; importance, types, and uses of health statistics
- Basic research methodology: introduction, key terms, and steps;
- Identification of a research problem;
- Definition of a problem;
- Sources of data (primary and secondary);
- Identification of the population;
- Definition and description of the population;
- Review of literature and critical review of literature;
- Justification for the study;
- Formulation of objective and research question;
- Methods of data collection (direct observation, interviewing, abstraction from published statistics, questionnaires, data collection tools);
- Description of the tools;
- Principles of preparation of tools; interview schedules; questionnaires;
- Sampling (definition of a sample; sampling methods; random, systematic, stratified, multi-stage, cluster, and quota sampling);
- Pretesting of data collection tools (instruments): definition, purpose, procedure;
- Data cleaning: definition, purpose, importance, procedures, different methods;
- Data organization: definition, importance; interpretation and dissemination

UNIT CODE: DHR1202 HEALTH STATISTICS II (20 HOURS)

I: DATA PRESENTATION

- Definition, purpose, importance and characteristics of data;

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- Types and presentation of data;
- Definition, description, purpose and importance of data presentation methods; narrative; tabulation; simple tables; multiple column;
- Principles of table construction (array presentation, frequency distribution, cumulative frequency);
- Different ways of presentation of data in charts and graphs (description, types, principles of construction, simple bar charts, competent bar charts, percentage component bar charts, multiple bar charts, pie charts, graph, histograms, frequency polygon curve. Ogive, break-even charts);
- Computer application in data processing, presentation and dissemination

UNIT CODE: DHR2102 HEALTH STATISTICS III (40 HOURS)

1: STANDARD HEALTH FACILITY ADMINISTRATIVE STATISTICS AND FORMULAE

Description of health facility administrative statistics; procedures of collecting health administrative statistics; tools for collecting health administrative statistics; uses and importance of health administrative statistics; description of the standard terms in health administrative statistics; computation of health facility administrative statistics; occupied bed days; available bed days; vacant bed days; admission, discharges, and deaths; well people; average occupancy; percentage occupancy; average length of stay; turnover interval; turnover per bed; crude hospital death rate; average discharge rate; average admission rate; applying standard health facility administrative terms and formulae accurately; collection, computation, presentation and analysis of outpatient statistics; maternal and child health evaluation techniques; family planning evaluation techniques; health activity analysis: interpretation, presentation, and dissemination of health administrative statistics.

2: VITAL HEALTH STATISTICS

Definition, description, and importance of vital health statistics; the various vital and health statistics rates/type of vital statistics; morbidity rate; fertility rate; crude birth rate; infant mortality rate; crude death rate; incidence and prevalence rates; formulae for calculating vital statistics; computer application in vital health data analysis and processing

UNIT CODE: DHR2202 HEALTH STATISTICS IV (40 HOURS)

I; MEASURES OF CETRAL TENDENCY

Calculation; mea; simple arithmetic mean; weighted arithmetic mean; arithmetic mean of

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

ungrouped frequency distribution; arithmetic mean of a frequency distribution; mean deviations from the mean; the geometric mean; mode; computation; finding mode using histogram; obtaining mode of a grouped frequency; median; ungrouped and grouped data; measures of dispersion: definition, description, calculation; range, quartiles, and deciles; standard deviation; skewness; regression; coefficient of correlation; electronic data processing; definition, description, and advantages; basic statistical packages; computer application in data analysis

II; MEASURES OF DISPERSION

Measures of dispersion: definition, description, calculation; range, quartiles, and deciles; standard deviation; skewness; regression; coefficient of correlation; electronic data processing; definition, description, and advantages; basic statistical packages; computer application in data analysis

III: PROBABILITY AND NORMAL DISTRIBUTION

Probability; normal distribution; standard normal deviate; binomial distribution; Poisson distribution; confidence interval; X^2-test/Chi-square; t-test; electronic computation of probability and normal distributions

UNIT CODE: DHR3102 HEALTH STATISTICS V (40 HOURS)

I; ALGEBRA

Content

Solving quadratic equations
- factorization
- completing the square
- formula method
- graphical method

Reducing equations to quadratic
Solving the reduces quadratic equations
Solving linear equations with three unknowns
Forming linear equations with three or more unknowns
Defining a matrix

- *row matrix or row vector (1, 2)*
- *column matrix or column vector [½]*
- *rectangular matrix*
- *square matrix*
- *singular matrix*
- *non-singular matrix*
- *null matrix*
- *identify matrix*

Carrying out matrix operations
- *additional/ subtraction*

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- *compatibility*
- *multiplication*
- *commutability and non-commutability*
- *division By a scalar*

Determining the inverse of matrices up to order 3
- *co-factor method*
- *row reduction method*

Using matrices to solve simultaneous equation
- *Cramer's rule*
- *inverse method*
- *row reduction (Gaussian Elimination)*

Applying the knowledge of matrices in solving real life problems industrial demand problems.
- *out put vector of the economy of say two industries*
- *message – coding*
- *storage of information*

GRAPHS AND FUNCTION

Specific Objectives

By the end of this topic, the trainee should be able to:
a) plot linear graph
b) make interpretations from linear graph
c) plot parabolic curves
d) solve simultaneous and quadratic equations by the graphical methods
e) present data in appropriate chart

Content

Plotting linear graphs
- *Intercepts of the axes $y = 0$, $x = 0$*

Making interpretations
- *Intercepts*
- *Gradients*

Making interpretations
- $y = mx + c$

Solution of simultaneous and quadratic equations by plotting (linear and parabolic) graphs.
Presentation of data in charts
- *Pie chart*
- *Bar chart*
- *Pictogram*

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- *Histogram*

UNIT CODE: DHR3202 HEALTH STATISTICS VI (40 Hours)

1. HYPOTHESIS TESTING

Content

Estimation
- definition
- need for estimation

Types of estimators
- point estimators
- interval estimators

Sampling distribution
- central limit problems
- x and 6 distribution
- distribution of difference between means (x) and between proportions (A/P)

Confidence interval and interpretations

Hypothesis
- definitions
- design and rules
- types

Types of errors
- type I errors
- type II errors

2. DECISION THEORY

Content

Definition of mathematical expectation
Calculation of mathematical expectation
Statement of Bayer's rule
Construction of pay-off table
Statement of maxima rule
Solution of decision tree problem

3. SAMPLING

Content

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Definition of terms
- random sampling
- sampling with replacement
- population
- samples
- sampling distributions

Explanation of the concepts of sampling distribution
Calculation of standard errors
Relationship between mean and SD of the sampling distribution of the mean and the SD of the parent distribution.
Recognition that the distributions of the sample mean of normal distribution is normal distribution.
Determination of population mean and SD from sample data
- when sample size is large
- when sample size is small

TEACHING METHODOLOGY

- Learner-centered
- Discussions
- Theory and practical training integrated
- Consideration of both individual and group-based practices/exercises
- Holistic project
- Lecture
- Group discussion
- Visiting health facilities
- Application exercise in classroom

- Practices/exercises
- Assignments
- Independent study of specified topics

ASSESSMENT METHODS

Theory paper examinations (CATs, end-of-semester, and final qualifying examinations):

Practical examinations

- OSPEs based on those in the prescribed practical assessment centres, including but not limited

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

to national, provincial and district hospitals

ASSESSMENT CONDITIONS

As per TSMHS examination policy

03. MODULE TITLE: ANATOMY AND PHYSIOLOGY

TIME: 80 HOURS **6 CREDITS**

MODULE COMPETENCE

This module is designed to equip the learner with the knowledge, skills and attitude in anatomy and physiology necessary for effective classification of diseases, conditions, and medical procedures according to International Classification of Diseases (ICD) and International Classification of Procedures in Medicine (ICPM), as well as effective communication and participation in research activities in health.

UNITS		**HOURS**
UNIT 1	Introduction to Anatomy and Physiology	10
UNIT 2	Human Skeleton and Joints	10

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

UNIT 3	Muscular System	10
UNIT 4	Circulatory System	10
UNIT 5	Respiratory System	10
UNIT 6	Digestive System	10
UNIT 7	Urinary System	10
UNIT 8	Nervous System	10
UNIT 9	Reproductive System	14
UNIT 10	Endocrine System	12
UNIT 11	Sensory Organs (Skin, Nose, Tongue, Ear and Eye)	14

MODULE OUTCOMES

At the end of the module the learner will be able to:

1. Define and state the common terms used in anatomy and physiology
2. Describe the embryology processes
3. Name major structures of the human body organs and systems
4. Describe the human body cavities
5. Define the term skeleton and list types of human skeleton and bones forming the human skeleton
6. Describe the anatomy and physiology of the human skeleton and various classifications of joints.
7. List and define the various types of human body structures, organs and systems.
8. Describe the anatomy and physiology of human body systems (muscular, circulatory, respiratory, digestive, urinary, nervous, reproductive and endocrine)
9. Describe the anatomy and physiology of the sensory organs (skin, nose, tongue, ear, and eye)
10. Use diagrammatic illustrations and explain the various human body organs and systems
11. Demonstrate ability to locate the various organs in the living body, cadaver or in models.

MODULE CONTENT

This module entails introduction to anatomy and physiology; description of human skeleton and joints; muscular, circulatory, respiratory, digestive, urinary, nervous, reproductive and endocrine, systems, and sensory organs.

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

UNIT CODE: DHR1103 ANATOMY AND PHYSIOLOGY – I (40 HOURS)

1: Introduction to Anatomy and Physiology

Definition of the terms anatomy and physiology; statement of the common terms used in anatomy and physiology; description of the embryology processes; definition of the term organ; naming of all body organs, description of the anatomy of the organs of the human body; describe the human body cavities.

2: Human Skeleton and Joints

Definition of the term skeleton; listing types of skeletons; listing all the bones forming the human skeleton; description of the structure and functions of the human skeleton; definition of the term joint; description of the various of the various classifications of joints; description of the structures and functions of the joints.

3: Muscular System

Definition of the muscular system; listing types of muscles; description of the structure and function of types of muscles

4: Circulatory System

Definition of the circulatory system (blood and lymph); naming major structures of the circulatory system; explanation of the systematic, pulmonary, and portal blood and lymph circulation.

UNIT CODE: DHR1203 ANATOMY AND PHYSIOLOGY – II (40 HOURS)

1: Respiratory System

Definition of the respiratory system; listing of major structures of the respiratory system; description of the structure and function of the respiratory system

2: Digestive System

Definition of the digestive system; listing of major organs of digestion system; description of the structures and functions of the digestive system and accessory organs of digestion

3: Urinary System

Definition of the urinary system; naming of major structures of the urinary system; description of the

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

structure and functions of the urinary system

4: Nervous System

Definition of the nervous system; description of the structure and function of the nervous system

UNIT CODE: DHR2103 ANATOMY AND PHYSIOLOGY – III (40 HOURS)

1: Reproductive System

Definition of the reproductive system; listing of major structures of the male and female reproductive systems; description of the structures and functions of the male and female reproductive systems

2: Endocrine System

Listing of major structures of the endocrine system; description of the function of the endocrine system

3: Sensory Organs

Description of the structures and functions of the skin, nose, tongue, ear, and eye.

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

04. MODULE TITLE: HUMAN PATHOLOGY

TIME: 60 HOURS **6 CREDITS**

Module competence

This module is designed to equip the learner with the knowledge, skills and attitude in pathology necessary for effective classification of diseases, conditions, and medical procedures according to ICD and ICPM, as well as effective communication and participation in research activities in health

UNITS		**HOURS**
UNIT 1	General Concepts of Disease and Principles of Diagnosis	04
UNIT 2	Inflammatory Processes and Its Role In Disease And Injury	04
UNIT 3	Body Immunity	06
UNIT 4	Role of Pathogenic Microorganisms and Parasites In Disease	04
UNIT 5	Communicable Disease Transmission and Control	06
UNIT 6	Congenital and Hereditary Diseases	06
UNIT 7	Neoplasms	08
UNIT 8	Abnormalities of blood coagulation and circulatory disorders	10
UNIT 9	major disease conditions related to Specific body systems and basic diagnostic tests	06
UNIT 10	Treatments commonly used	06

MODULE OUTCOMES

At the end of the module the learner will be able to:

1. Discuss general concepts of disease and principles of diagnosis
2. Describe the inflammatory process and its role in disease and injury
3. Describe cell mediated and humeral immunity

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

4. Describe the role of pathogenic micro-organisms and parasites in disease
5. Describe communicable disease transmission and control
6. Describe congenital and hereditary disease causes and manifestations
7. Describe types and characteristics of neoplasm and modalities of treatment
8. Describe the abnormalities of blood coagulation and circulatory disorders
9. Describe major disease conditions related to Specific body systems and basic diagnostic tests
10. Describe treatments commonly used

MODULE CONTENT

This module entails explanation of general concepts of disease and principles of diagnosis; inflammatory process and its role in disease and injury; body immunity; role of pathogenic micro-organisms and parasites in disease; description of communicable disease transmission and control; congenital and hereditary disease; neoplasm; abnormalities of blood coagulation and circulatory disorders; major disease conditions related to Specific body systems and identification of basic diagnostic tests.

UNIT CODE: DHR1104 PATHOLOGY I

Time: 40 hours

1: General Concepts of Disease and Principles of Diagnosis

Characteristics of disease process; basic principles of diagnosis; use of diagnostic tests and procedures

2: Inflammatory Process and its Role In Disease And Injury

Characteristics and clinical manifestation of an acute infection; outcomes of an inflammatory reaction and comparison between infection and inflammation

3: Body Immunity

Role of lymphocytes in the immune response; compare immunity and hypersensitivity; classes of antibodies and allergic manifestations and methods of treatment

4: Role of Pathogenic Micro-organisms and Parasites in Disease

Major groups of pathogenic bacteria; mechanism by which antibodies inhibit the growth of bacteria; mode of action of virus infection and he body's response; spectrum of infections caused by fungi and

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

common parasitic infestations and how they are acquired

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

UNIT CODE: DHR1204 PATHOLOGY II

Time: 40 hours

1: Communicable Disease Transmission and Control

Communicable disease transmission and control; common sexually transmitted diseases and their clinical manifestation; complication and methods of treatment

2: Congenital and Hereditary Disease

Common causes of congenital malformation; abnormalities of sex chromosomes and their clinical manifestation; common genetic abnormalities

3: Neoplasms

Characteristics of benign and malignant tumors; principal modalities of cancer treatment

1: Abnormalities of Blood Coagulation and Circulatory Disorders

Common causes of disturbance in hemostasis; causes and effect of arterial and venous thrombosis and factors disturbing the regulation of circulation

2: Major Disease Conditions Related To Specific Body Systems and Basic Diagnostic Tests

Cardiovascular and circulatory system; respiratory system; male and female reproductive system (including conditions occurring during pregnancy); urinary system; gastrointestinal system; endocrine system; nervous system; musculoskeletal system.

3: Treatments Commonly Used

Pharmacology; revision of all the disease affecting the various human body systems

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

05. MODULE TITLE: HEALTH DATA CLASSIFICATION

TIME: 60 HOURS **6 CREDITS**

UNIT1	introduction and the Structure of ICD and ICPM	08
Unit 2	Organization and Categories of ICD and ICPM	12
UNIT 3	coding and Indexing	10
UNTI 4	Certification of Underlying Causes of Death	16
UNIT 5	Statistical Presentation	14

MODULE OUTCOMES

At the end of the module the learner will be able to:

1. Describe the structure and categories of ICD and ICPM
2. Code and index diseases and underlying causes of disease
3. Explain the certification of underlying causes of death
4. Analyze and present disease and underlying causes of death
5. Analyze and present reports

MODULE CONTENT

UNIT CODE: DHR1105 HEALTH DATA CLASSIFICATION I (40 HOURS)

1: INTRODUCTION AD STRUCTURE OF ICDAND ICPM

Definition, importance and historical development of ICD and ICPM; prominent earlier classifications; current ICD and ICPM ; general arrangement of ICD and ICPM operations and their application

2: ORGAIZATION AND CATEGORIES OF IDC AND ICPM

Organization of Vol. I and Vol. II of ICD books; organization of both Vol. I and Vol. II of ICPM; tabular list Vol. I; diseases, nature of injury, alphabetical index Vol. II; diseases, injuries and supplemental classification; adverse effects of drugs and other chemical substances; comparison of the two editions; arrangement of ICPM Vol. I and vol. II; alphabetical index; numerical index of procedures

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

in medicine; introduction chapters and the categories

3: CODING AND INDEXING

Definition; purpose; principles, and procedures, standardization, management, planning, research and teaching; statistical analysis; systematic arrangement of health information: primary arrangement (indices ad modifier), eponyms (main entries, modifiers, adjectives, comparison of previous editions and present editions); tabular list; category codes; use of category codes; use of more than one code; combined category code; use of inclusions and exclusions; provisional diagnosis; dual classification; coding of neoplasms (classification; grouping, Specific coding instruction, special consideration, undetermined primary site, metastatic site, suspected neoplasm rule out); use of M-code; mental disorders; combined category codes; mental conditions and physical condition; intended primarily for psychiatric conditions; use of two codes to express mental and physical condition; mental retardations, forth digit; sub-divisions; obstetric coding (pregnancy, normal, completion of pregnancy, combine category code for certain condition complication pregnancy, associated conditions (abortions, deliveries, normal complicated, premature, multiple and still birth, obstetrical procedures, tabular list of operation, spontaneous deliveries), postpartum conditions.

UNIT CODE: DHR1205 HEALTH DATA CLASSIFICATION II (30 HOURS)

1: CERTIFICATION OF UNDERLYING CAUSES OF DEATH

Rules and guidelines for morbidity and mortality: causes of death recorded; selecting the underlying cause; determine the originating antecedent cause of death; general principle of selecting he guiding rules; clinical judgment in completing the medical certificate of cause of death; limiting the rage of diagnosis; accuracy and usefulness of the report

2: STATISTICAL PRESENTATION

Definition of terms; sources of obtaining mortality data; selection; reporting requirements related to fetal, perinatal, neonatal, and infant mortality; presentation and statistical analysis; definition of data security ad confidentiality

TEACHING METHODOLOGY

- Lecture
- Focus group discussion
- Brainstorming

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- Student-centered
- Self-directed learning
- Practical integrated with other modules
- Practices/exercises

ASSESSMENT METHODS

Theory paper examinations (mid-semester, end-of-semester, and final qualifying examinations):

- Multiple choice questions
- Matching variable statements
- True or false answer questions
- Essay questions

Practical examinations

- OSPEs based on those in the prescribed practical assessment centres, including but not limited to national, provincial and district hospitals

ASSESSMENT CONDITIONS

REFERENCES

1. ICD-10
2. ICPM

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

06. MODULE TITLE; MEDICAL TERMINOLOGY

TIME: 60 HOURS		**6 CREDITS**
UNITS		
UNIT 1	Introduction to Medical Terminology	04
UNIT 2	components of Medical Terms	06
UNIT 3	Terms related to Body Systems	20
UNIT 4	Medical Abbreviation	15
UNIT 5	Disease and Treatment	15

MODULE OUTCOMES

At the end of each unit the learner will be able to:

1. Explain the scope and nature of terminology used in medicine
2. Identify words that describe general anatomical features, medical tools, equipment, and procedures
3. Identify words that describe pharmacological terms
4. Identify words that describe physiological and anatomical features in the body parts and systems

MODULE CONTENT

UNIT CODE: DHR1106 MEDICAL TERMINOLOGY - I
Time: 40 hours

1: INTRODUCTION TO MEDICAL TERMINOLOGY

Definition of medical terminology; importance of medical terminology; origin (historical background) of medical terms.

2: COMPONENT OF MEDICAL TERMS

Component part of medical terms; commonly used prefixes, suffixes, stems, medical abbreviation, signs, and symbols in disease and procedures in medicine; component parts of medical and pharmacological terms; examples of prefixes, suffixes, and terms

3: TERMS RELATED TO BODY SYSTEMS

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Disease and conditions of each body system; terms related to diagnostic procedures of each body system; abbreviations used in each body system

UNIT CODE: DHR1206 MEDICAL TERMINOLOGY - II
Time: 40 hours

1: MEDICAL ABBREVIATION

Abbreviations used in each body system

2: DISEASE AND TREATMENT

Describe types of diseases and infections; responses to diseases; word part pertaining to diseases; diagnosis and treatment; surgery; cancer

TEACHING METHODOLOGY

- Lecture
- Focus group discussion
- Brainstorming
- Student-centered
- Self-directed learning
- Practical integrated with other modules
- Practices/exercises

ASSESSMENT METHODS

Theory paper examinations (cats, end-of-semester, and final qualifying examinations):

- Multiple choice questions
- Matching variable statements
- True or false answer questions
- Essay questions

Practical examinations

- OSPEs based on those in the prescribed practical assessment centres, including but not limited to national, county and sub-county hospitals.

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

07. MODULE TITLE: HEALTH INFORMATION SYSTEMS

TIME: 60 HOURS **6 CREDITS**

MODULE COMPETENCE

The module is designed to equip the learner with the necessary knowledge, skills and attitude for organizing and managing health information systems.

UNITS		**HOURS**
UNIT 1	Introduction Health Information Systems	04
UNIT 2	Organization of Health Information in Kenya	04
UNIT 3	Health Sector Indicators	08
UNIT4	Data collection tools in Health Information systems	14
UNIT 5	Sources of Health Information	04
UNIT6	Use of computers in Health Information Systems	12
UNIT 7	Data Analysis and Interpretation	10
UNIT8	Information Presentation and Dissemination	04

MODULES OUTCOMES

At the end of the module the learner will be able to:

1. Introduce health information systems
2. Describe the organization of health information systems in Kenya
3. Discuss the health sector indicators
4. Explain data collection tools in health information systems
5. Describe the sources of health information
6. Organize and manage the procedures for completing and forwarding health information services reports accurately and promptly
7. Apply ICT in organizing and managing health information services reports
8. Organize and manage the collection, collation, analysis, presentation, and dissemination of health information

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

MODULE CONTENT

UNIT CODE; DHR 1107 HEALTH INFORMATION SYSTEMS - I
Time: 30 hours

1: Introduction Health Information Systems

Description of health information; historical background, health information services in Kenya; concept of health information services (WHO); goals of health information systems ; the value and importance of health information; the role of health information in managing health activities and socioeconomic activities; health information system resources; policies and regulation; outline the link between health information services and the user.

2: Organization of Health Information Systems in Kenya

Description of the tiers of care: Tier One – Community Level; Tier Two-dispensary and Health Centres; Tier Three –county and sub-county Hospitals; Tier Four-National referrals.

3: Health Sector Indicators

Definition; types of indicators; domains (input, process, output, impact); units of measure (rates, ratios); purpose; frequency; coverage and performance; data source (numerators and denominators); application level (sector, programme, national, county, facility, community, Millennium development goals [MDGs])

UNIT CODE; DHR 1207 HEALTH INFORMATION SYSTEMS - II
Time: 30 hours

1: Data Collection Tools in Health Information Systems

B Description of national tools used in collection of health information; the sources of health information; types of tools; primary (registers, forms), secondary (weekly notification of infectious diseases, monthly notification of infectious diseases); outpatient morbidity report; inpatient morbidity mortality report forms; district outpatient morbidity summary forms; integrated RH, HIB, malaria, TB, and nutrition; vaccine and immunization; nutrition monthly reporting, HIV reporting tools; community

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Based Health Information System (CBHIS); district Health Information System (DHIS); Geographic Information system (GIS); Master Facilities List (MFL); procedures of completing HIS reporting tools

2: Sources of Health Information

Explanation of sources of health information; surveys; demographic data; health activities; health status; resources, community information; statutory reporting tools (birth registration and notification; death registration ad notification); statutory agencies (central Bureau of Statistics, Attorney General Chambers)

UNIT CODE; DHR 2107 HEALTH INFORMATION SYSTEMS - III
Time: 30 hours

1: Uses of computers in Health Information systems

Description of data handling; computer application; the role of computers in health information systems; application of relevant existing HIS software (EMR, DHIS, MFL); computer operations' preparation of data entry sheets; procedure of computer data input and output; various input media, computer operation; micro-and mini-computer; validation of data; data processing (analysis); Explanation of the various information output form computers.

2: Data Analysis and Interpretation

Computation of health indicators; target setting; response rate; immunization coverage rate; maternal and child health; maternal death rate; child survival rate; antenatal and postnatal coverage rate, family planning; acceptance rate; continuation rate; dropout rate; coverage rate; morbidity rates; prevalence and incidence rates; data interpretation; computer us in HIS

3: Information Presentation and Dissemination

Outline of procedures of report writing and dissemination of health information; administrative; routine; the need for accuracy; thoroughness; timeliness and promptness of information; explanation of determination of suitable methods of information presentation; the importance of information usage for evidence-based decision making

TEACHING METHODOLOGY

- Lecture-centred
- Discussion

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- Theoretical and practice training integrated
- Consideration of both individuals and group based practices/exercises
- Holistic project
- Lecture
- Group discussion
- Visiting health facilities
- Application exercise in a classroom
- Practical exercise
- assignments
- Independent study of specified topics

RESOURCE CONDITIONS

Training, teaching, and learning materials

Computer lab with internet

Trainer's guide

Reference manuals and books

Learner's guide

HIS Policy
Kenya ICT Policy
NHSSP 2
HIS Strategic Plan
Kenya Vision 2030
Handout
Books

Journal (AHIMA, etc)

ASSESSMENT METHODS

Theory paper examinations (mid-semester, end-of-semester, and final qualifying examinations):

- Multiple choice questions
- Matching variable statements

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- True or false answer questions
- Essay questions

Practical examinations

- OSPEs based on those in the prescribed practical assessment centres, including but not limited to National, Provincial and District hospitals

08. MODULE TITLE: COMPUTER APPLICATIONS

TIME: 120 HOURS 12 **CREDITS**

MODULE COMPETENCE

To enable the learner to collect, compute, analyze, interpret ad disseminate data for better healthcare service delivery

UNITS		HOURS
UNIT 1	Introduction to ICT & Ethics	20
UNIT XFD2	Computer Application Packages	20
UNIT 3	Computer Operating Systems	20
UNIT 4	System Analysis & Design	20
UNIT 5	Database Management Systems	20
UNIT 6	Computer Networking	20

MODULE OUTCOMES

At the end of the module the learner will be able to:

5. Apply basic skills in computer allocation packages
6. Utilize basic statistical skills for evidence –based decision making
7. Present data using various presentation packages
8. Analyze and process data using basis ICT skills

MODULE CONTENT

DHR1108 COMPUTER APPLICATIONS I (20 HOURS)
INTRODUCTION TO INFORMATION COMMUNICATION TECHNOLOGY & ETHICS

INTRODUCTION

This module unit is intended to introduce the trainee to Information Communication Technology, equipping him/her with the necessary knowledge, skills and attitude to

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

enable him/her professionally work with ICT facilities.

GENERAL OBJECTIVES

By the end of this module unit, the trainee should be able to:-

a) appreciate the role of ICT in health records field

b) appreciate the ethical and legal implication in the use of ICT

c) appreciate the basic skills necessary in the use of ICT

Specific Objectives

By the end of this topic, the trainee should be able to:-

a) Explain the meaning of ICT
b) Explain the uses of ICT
c) Describe ICT equipment / facilities found in organizations
d) Explain the impact of ICT in contemporary society

INTRODUCTION TO COMPUTERS

Specific Objectives

By the end of this topic, the trainee should be able to:-

a) explain the meaning and importance of a computer
b) describe the components of a computer
c) describe computer hardware
d) describe computer software
e) explain the historical evolution of computers
f) describe the classification of computers
g) explain the benefits and challenges of computers

Content

- Meaning and importance of a computer
- Historical evolution of computers
- Computer components
  - ✓ Computer hardware
  - ✓ Computer Software
- Classification of computers
  - ✓ super computers
  - ✓ mainframe computers
  - ✓ micro computers
  - ✓ mini computers

Benefits and challenges in the use of computers

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

COMPUTER HARDWARE AND ORGANISATION

Specific Objectives

By the end of this topic, the trainee should be able to:-

a) describe computer hardware devices

- Computer hardware devices
  - ✓ input devices
  - ✓ output devices
  - ✓ central processing unit
  - ✓ storage devices
  - ✓ bus system
  - ✓ others

COMPUTER SOFTWARE

Specific Objectives

By the end of this topic, the trainee should be able to:-

a) explain the meaning and importance of computer software

b) describe the classification of computer software

Content

- Meaning and importance of computer software
- Classification of computer software
  - ✓ System software
    - operating systems
    - housekeeping software
  - ✓ Application software
    - Application packages
    - User software

COMPUTER SAFETY

Specific Objectives

By the end of this topic, the trainee should be able to:-

a) describe the meaning and importance of computer safety and ergonomics

b) describe computer safety

Content

- Meaning and importance of computer safety and ergonomics
- Computer safety
  - ✓ hardware safety
  - ✓ software safety

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- ✓ data safety

ICT ETHICS AND LEGISLATIONS

Content

- Meaning and importance of ICT ethics
- Unethical behaviour in ICT
  - ✓ software piracy
  - ✓ unauthorized access
  - ✓ others
- Reasons for unethical behaviour in ICT
- Measures for controlling unethical behaviour in ICT
- Sources of ICT legislations
- ICT legislations and policies
  - ✓ ICT policy
  - ✓ Data Protection
  - ✓ Copyright
  - ✓ Information Privacy
  - ✓ Others
- Enforcement measures for ICT legislation and policies

DHR1208 COMPUTER APPLICATION II (20 HOURS)
UNIT 02: COMPUTER APPLICATION PACKAGES

INTRODUCTION

This module unit is designed to equip the trainee with the practical skills on the use of basic computer application packages.

GENERAL OBJECTIVES

By the end of this topic, the trainee should be able to:

a) understand the basic concept of computer application packages
b) appreciate and use word processing application software
c) use spreadsheet application software
d) use database application software
e) appreciate and use presentation application software

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

WORD PROCESSING
Content

- Definition of word processing
- Understanding of word processing concepts
  - ✓ creation of a document
  - ✓ printing of a document
  - ✓ independence of the operations of creation
- Explanation of the features of word processors
- Skills in document formatting
  - ✓ page format
    - -- margins
    - -- headers and footer -- alignment
    - -- orientation
  - ✓ indenting
  - ✓ formatting text
  - ✓ text styles
    - -- underline -- bold
    - -- italics
  - ✓ typeface and size
    - -- typeface (fonts) -- font size

- Skills in document printing
  - ✓ single or multiple copies
  - ✓ full or part of document
- orientation
  - -- Landscape
  - -- Portrait

- Skills in mail merging
  - ✓ data source document creating
  - ✓ main document
  - ✓ merging
- Skills in table creation and line drawing
- Skills in table creation and line drawing
  - ✓ Tables
  - ✓ line draw
- Skills in use of templates
- Multiple column formats
  - ✓ newspaper columns
  - ✓ parallel columns
- Skills in use of word processing utilities
  - ✓ Sorting

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- ✓ Selection
- ✓ spell checking
- ✓ thesaurus
- ✓ bookmarks
- ✓ grammar checkers

- Skills in use of object formulae and equations
  - ✓ Objects
  - ✓ Formulae
  - ✓ Functions
  - ✓ special symbols

- Skills in the use of macros
- Skills in the use of advanced work processing features

  - ✓ table of contents
  - ✓ table of figures
  - ✓ indexes
  - ✓ electronic mail

SPREADSHEET

Content

- Explanation of the worksheet layout
  - ✓ Columns
  - ✓ rows
  - ✓ cells
  - ✓ single cell referencing
  - ✓ range of cell referencing
  - ✓ referencing using labels
  - ✓ absolute and relative cell referencing

- Worksheet formatting
  - ✓ fonts
  - ✓ alignments

✓ column width and row height
✓ Boarders
✓ enhancing data appearance
✓ page formatting

Explanation of cell data types
- ✓ Labels
- ✓ Values
- ✓ Formulae

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Using formulae and functions

- ✓ Formulae
- ✓ Functions

Explaining charting

- ✓ data ranges
- ✓ chart/graph types
- ✓ graph headings
- ✓ additional facilities

-- Column
-- 2D/3D graphs
-- page layout
-- Gridlines
✓
Synchronization

Explaining skills in simple database management

- ✓ worksheet database
- ✓ data forms
- ✓ linking worksheet
- ✓ linking
- ✓ query/extraction

Printing of worksheets and charts

Using utilities

- ✓ sorting
- ✓ spell checking
- ✓ filtering

Explaining the use of macros

- ✓ definition
- ✓ recording storing key strokes
- ✓ editing and debugging
- ✓ printing/laying back macros
- ✓ advanced macro command

DATABASE

Content

Description of the database structure

- ✓ field name
- ✓ field types
- ✓ field width
- ✓ table

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Creating a database

- ✓ data entry
- ✓ saving

Description of retrieval and editing facilities

- retrieving

  -- loading -- browsing -- listing
  -- displaying
- editing

  -- appending -- insertion -- deletion -- recalling
  -- altering databases structure

Explanation of sorting and indexing

- sorting

  -- ascending order -- descending order -- selective sorting
- indexing

  -- single field
  -- selective indexing -- levels of indexing

Explanation of logic and arithmetic functions

Explanation of querying

- single field conditions
- multiple field conditions
- logical operators

-- AND
-- OR
-- NOT

Explanation of reporting and labeling

Description of screen/view formatting

- layout

-- labels -- fields

- purpose

Explanation of linking of databases

- tables of same databases
- table of different databases

DHR2108: COMPUTER APPLICATIONS III (20 HOURS)

UNIT 03: OPERATING SYSTEMS

INTRODUCTION

This module unit is intended to equip the trainee with knowledge, skills and attitudes to enable him/her use operating system in a computing environment.

GENERAL OBJECTIVES

By the end of the module unit the trainee should be able to:

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

a) understand the principles of operating systems
b) appreciate the functions of operating systems
c) use operating systems in a computer environment

INTRODUCTION OPERATING SYSTEMS

Specific Objectives

By the end of this topic, the trainee should be able to:
a) explain the meaning and importance of an operating systems
b) define operating systems terminologies
c) describe the types of operating systems

Content

Meaning and importance of operating systems
Explanation of types of Operating System
- Traditional Operating system
- Multiprocessor Operating System
- Distributed Operating System
-Functions of the operating systems
-Types of Operating Systems and how to work with them.
- Introduction to Ms Windows Components

DHR2208: COMPUTER APPLICATIONS IV (20 HOURS)

UNIT 04: SYSTEM ANALYSIS & DESIGN

INTRODUCTION

This module unit is intended to equip the trainee with the knowledge, skills and attitudes to enable him/her to undertake systems analysis and design.

GENERAL OBJECTIVES

By the end of this module unit, the trainee should be able to:
a) understand systems concepts
b) understand systems analysis and design phases
c) use systems analysis design tools and techniques
d) apply systems development methodologies

INTRODUCTION TO SYSTEMS ANALYSIS AND DESIGN

Content

Meaning of terms:
- system
- information
- information system
- information technology

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Components of an information system
Types of information systems
- Transaction processing systems
- Management information systems
- Decision support systems
-Expert systems
- Office automation systems
- Others

Roles of information systems stake holders
- systems owners
- systems users
- systems analyst
- systems designers
- systems developer
- other

SYSTEMS DEVELOPMENT LIFE CYCLE (SDLC)

Content

Meaning of SDLC
SDLC stages
- problem definition
- feasibility study
- systems analysis
- systems design and development
- implementation
- maintenance and review

DHR3108: COMPUTER APPLICATIONS V (20 HOURS)

UNIT 05: DATABASE MANAGEMENT SYSTEMS

INTRODUCTION

This module unit is designed to equip the trainee with knowledge, skills and attitude that will enable him/her understand the management of databases.

GENERAL OBJECTIVES

By the end of this module unit, the trainee should be able to:-
a) appreciate database design and development
b) understand the components of database management systems
c) develop and manipulate a database

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

INTRODUCTION TO DATABASE MANAGEMENT SYSTEMS

Content

Meaning of database management system
Components of databases
Historical evolution of DBMS
Traditional verses database approaches
Advantages of DBMS
Database systems
Role of key players in database design and development

QUERYING A DATABASE

Theory

Content

Meaning of a database query
Features of SQL
Categories of SQL

Practice

Designing and using statements to interrogate/query a database

DHR3208: COMPUTER APPLICATIONS VI (20 HOURS)

UNIT 06: COMPUTER NETWORKING

INTRODUCTION

This module unit is designed to equip the trainee with knowledge, skills and attitude that will enable him/her install and manage computer networks

GENERAL OBJECTIVES

By the end of this module unit, the trainee should be able to:
a) understand the concepts of computer networks
b) understand the various data transmission techniques
c) appreciate the use and application of internet

INTRODUCTION TO COMPUTER NETWORKS

Content

Meaning of computer network
Components of computer network
Types of computer networks
Role of computer networks
Network topologies
Categories of computer networks

NETWORK MEDIA

Content

Electrical properties of matter

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Importance of different transmission media
Types of transmission media
- bounded
- unbounded
Describing wireless networks and topologies
Explaining the advantages/disadvantages of different media

INTERNET

Content

Configuring computer for internet use
Demonstrating file transfer network
browsing internet

09. MODULE TITLE: COMMUNITY HEALTH

TIME: 140 HOURS **12 CREDITS**

MODULE COMPETENCE

This module is designed to enable the learner to acquire the necessary knowledge, skills, and attitudes on sociodemographic characteristics for carrying out community diagnosis and research

UNIT CODE: 1109 - COMMUNITY HEALTH I (40HRS)

UNITS		HOURS
UNIT 1	Introduction Concepts in Community Health	06
UNIT2	Communicable and Non-communicable diseases	16
UNIT 3	Disease prevention	18

UNIT CODE: 1209 - COMMUNITY HEALTH II 40HRS

UNIT 4	Community Diagnosis	08
UNIT 5	Community Health Surveys	08
UNIT6	Community Strategy	08

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

UNIT 7	Environmental and Health	08
UNIT 8	Drug and Substance Abuse	08

UNIT CODE: 3109 - COMMUNITY HEALTH III 40HRS

UNIT 9	Primary Health Care	24
UNIT 10	HIV/AIDs and STIs	16

UNIT CODE: 3209 - COMMUNITY HEALTH IV 20HRS

UNIT 11	Maternal and Child Health	06
UNIT 12	Nutrition and Health	06
UNIT 13	Planning and Evaluating Community Health Services	08

MODULE OUTCOMES

At the end of the module, the learner will be able to:

1. Apply knowledge and skills in designing and implementing community health interventions
2. Apply knowledge and skills in monitoring and evaluation of community health interventions
3. Apply knowledge and skills in conducting community research

MODULE CONTENT

UNIT CODE: DHR 1109 COMMUNITY HEALTH I

1: Introduction and Concepts in Community Health

Concepts, aims, services; definition of terms used in community health (population coverage, high risk groups, need for health services , demand for health services, primary health care); needs and demands of health services; risk of diseases; services in primary health care; problem solving in community medicine; MDGs

2: Communicable and Non-Communicable diseases

Introduction to communicable diseases, epidemiologic triangle model of disease causation (agent, host, and environment); the transmission cycle; principles for managing communicable disease; investigation and control of epidemics; methods of control and eradication of diseases; introduction to non-communicable diseases; risk factors; prevention strategies, basic treatment, community participation in disease control programmes

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

3: Disease Prevention

Primary, secondary, and tertiary prevention; health education at all stages

UNIT CODE: DHR 1209 - COMMUNITY HEALTH II

1: Community Diagnosis

Description, steps, aims; types of information in community diagnosis and intervention sources; evaluation of community diagnosis

2: Community Health Services

Definition of term; types of survey; reasons for carrying out surveys; planning surveys; biased sample and response rates in relation to survey; conducting the survey; evaluation; feedback; errors that may lead to inaccuracy when completing survey tools; points to be considered in constructing a questionnaires; various methods of presenting information; plan a community survey

3: Community Strategy

Introduction, objectives; roles of households and communities; implementation framework and process; community mobilization; involvement and participation, procedures of community-based research; income-generating activities, skills in training community resource persons

4: Environment and Health

Definition of key terms; environmental factors that affect our health; relationship of individual, family, and community; members of health teams and their responsibilities; how beliefs and customs affects the health of an individual; role of community in preserving the environment

5: Drug and Substance Abuse

Definition of key terms; classification of drugs; commonly abused drugs; effects of drugs (individuals, households, and community); illness associated with drug abuse; behavior change communication (BCC) strategy

UNIT CODE: DHR 3109 - COMMUNITY HEALTH III

1: Primary Health Care

Definition of primary health care/community based health care; principles and concepts; strategies; elements; levels of health care services; roles and functions of Health Records and Information Officer in the implementation of primary health care programmes; roles and functions of community and

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

health workers in the primary health care programmes.

2: HIV/AIDS and STIs

Causes; spread; impacts; management; prevention

UNIT CODE: DHR 3209 - COMMUNITY HEALTH IV

1: Maternal and Child Health

Introduction; services (immunization, family planning, antenatal); health education; community-based maternal and child health care

2: Nutrition and Health

Introduction; basic nutrition; community nutrition; nutrition in pregnancy and lactation; malnutrition and other related conditions

c: Planning and Evaluation Community Health Services

Introduction; objectives; community health cycle; choosing priorities; setting goals; organizations; selecting measures of success; outcomes; evaluation of programmes

Practical Session: Community Diagnosis and Planning a Community Survey

Visit a community unit; observe the organization of health services at the community unit; data collection tools; linkage between community unit and facility; community diagnosis; plan a community survey

TEACHING METHODOLOGY

- Lectures
- Group discussions
- Practical (community diagnosis and plan a community survey)
- Assignments

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

DHR3203 INTRODUCTION TO MIS II
Time: 30 hours

What is an Information System?

A Business Perspective on Information System

Contemporary Approaches to Information Systems

The New Role of Information Systems in Organization

New Options for Organizational Design: The Networked Enterprise

The strategic role of information systems

Key System Applications in the Organization

Different Kinds of Systems

Six Major Types of Systems

The Strategic Role of Information Systems

What is a Strategic Information System?

How Information Systems Promote Quality

What is Quality?

Major types of information systems

Operational Level Information Systems
Knowledge Level Information Systems

Relationship of Systems to One Another: Integration

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

MODULE TITLE: HUMAN PSYCHOLOGY

TIME: 30 HOURS **3 CREDITS**

MODULE COMPETENCE

This module is designed to equip the learner with the knowledge, skills, and attitudes necessary to provide services at the health care facility and community level.

UNIT		HOURS
UNIT 1	Introduction to Psychology	02
UNIT 2	Human growth and development	04
UNIT 3	Bio psychological Processes	04
UNIT 4	Cognitive Psychology	02
UNIT 5	Motivation and Emotions	04
UNIT 6	Personality	04
UNIT 7	Psychology and Health	02
UNIT 8	Social Psychology	04
UNIT 9	Abnormal Psychology and Therapeutic Approaches	04

MODULE OUTCOMES

At the end of the module, the learner will be able to:

1. Apply psychological principles in understanding human behavior
2. Demonstrate understanding of the human lifespan development and its influence on health
3. Appreciate the different psychological and personality influences on health and health care delivery
4. Apply learned knowledge, attitude and skills in therapeutic approaches to health care

MODULE CONTENT

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

UNIT CODE: DHR2315 HUMAN PSYCHOLOGY I

1: Introduction to Psychology

Concepts and principles; historical background; goals of psychology; methods used in studying psychology; branches; relevance of psychology in medical practice system; human growth and development; hereditary and the environment; prenatal development (germinal, embryonic, fetal stages); infant and child development (physical, perceptual, cognitive, psychosocial); adolescent development (physical, cognitive, psychosocial); adulthood (physical, cognitive, psychosocial, ageing, death and dying)

2: Human Growth and Development

3: Bio psychological Processes

Nervous system; functions of the brain (sensation and perception); sensory processes (sensory thresholds, adaptation, vision, hearing, smell, taste, touch, temperature, pain, kinesthetic, vestibular); consciousness (sleep and dreams, patterns, duration, functions, hypnosis, nature, effects and induction, meditation, psychoactive drugs and consciousness)

4: Cognitive Psychology

Learning; theories; behaviorists; cognitive; conditioning; social learning theory; observational learning; imitation perception; attention memory (information processing and memory, sensory memory, short-term and long-term memory); encoding; storage; retrieval; forgetting; improving memory; biopsychology of memory; thinking (concept formation, problem solving, creativity, decision-making, artificial intelligence); language (structure, acquisition, relationship between language and thinking); intelligence (theories, extremes, testing)

5: Motivation and emotions

Motivation (concepts, sources); hereditary; drives; incentives; Maslow's hierarchy of needs; hunger motive (factors regulating hunger, obesity, eating disorders); sex motive (physiological factors, psychological factors, sexual dysfunction, gender identify, sexual orientation); arousal motive |(sensory deprivation, sensation seeking); achievement motive (need for achievement, goal setting, intrinsic motivation); emotion (physiology of emotion, autonomic nervous system, brain and emotion, chemistry of emotion, expression of emotion, experience of emotion, theories of emotion)

6: Personality

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Concepts; bio psychological approach (physique, hereditary, assessment); psychoanalytic approach (psychosexual theory, psychosocial theory, analytical, individual psychology, psychoanalytic assessment of personality); dispositional approach (type, traits theories, dispositional assessment); behavioral

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

approach (operant conditioning, social-cognitive theory, assessment); cognitive approach (personal construct theory; assessment); humanistic approach (self-actualization theory, self-theory, assessment)

7: Psychology and Health

Stress and illness (sources, effects, mediation, coping): health impairing habits (nutrition, smoking, exercise, unsafe sexual practices); reactions to illness (distress, seeking treatment, adherence to medical regimens)

8: Social Psychology

Social cognition (impression, attribution); social attraction (attraction, liking love); social attitudes (formation, persuasion, attitudes and behavior, prejudice); group processes |(group decision-making, performance, social influence); pro-social behavior 9altruism, bystander intervention; aggression (theories, group violence, television and aggression)

9: Abnormal Psychology and Therapeutic approaches

Abnormal psychology; psychological disorders (criteria, viewpoints, classification); anxiety disorders (generalized anxiety disorders, panic disorder, phobias, obsessive compulsive disorder, somatoform disorders, conversion disorders, hypochondriasis); dissociative disorders (dissociative fugue, dissociative amnesia, multiple personality); mood disorders (major depression, bipolar disorder, causes); schizophrenia (causes, characteristics, types); personality disorders; therapeutic approaches (history, orientations/styles)

TEACHING METHODOLOGY

- Lectures
- Group work/ discussions
- Self-directed learning
- Demonstrations
- Assignment and presentations
- Field assignments

INSTRUCITONAL MEDIA/TEACHING AIDS

- Overhead projector
- Slide projector

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- Chalk/blackboard
- Whiteboard marker/whiteboard
- Flip charts
- Charts
- Pictorial
- Video
- Handouts
- Multi-media

ASSESSMENT METHODS

- Essay questions
- Short answer questions
- Modified essay questions
- Multiple choice questions
- Assignments
- Presentations

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

11. MODULE TITLE: EPIDEMIOLOGY

TIME: 100 HOURS **12 CREDITS**

MODULE COMPETENCE

This module is designed to equip the learner with the knowledge and skills of disease determinants and distribution for effective prevention and control of diseases.

UNITS		**HOURS**
UNIT 1	Introduction to Epidemiology	06
UNIT 2	Dynamics of Disease Transmission	24
UNIT 3	Measures of morbidity, mortality and association	30
UNIT 4	Disease Surveillance and Outbreak Investigations	20
UNIT 5	Epidemiological Data and Study Designs	06
UNIT 6	Principles of disease Measurements	14

MODULE OUTCOMES

At the end of the module, the learner will be able to:

1. Apply the concepts of epidemiology in health care service
2. Describe the distribution and determinant of diseases
3. Calculate, interpret and apply basic measures of morbidity, mortality and association
4. Describe the major types of epidemiologic research
5. Carry out epidemiological studies
6. Demonstrate the principles of disease measurements

UNIT CODE: DHR2111 EPIDEMIOLOGY I (30 HOURS)

1: Introduction to Epidemiology

Definition of epidemiology and its origin; terms used in epidemiology; determinants of disease; occurrences of diseases; natural history of disease; level of disease prevention; ecological approach to disease causation; scope of epidemiology; uses and purposes of epidemiology

2: Dynamics of Disease Transmission

Communicable disease epidemiology; chain of disease transmission; methods of controlling communicable disease; vaccine preventable disease; expanded programme on immunization (EPI)

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

UNIT CODE: DHR2211 EPIDEMIOLOGY II (30 HOURS)

1: Measures of Morbidity, Mortality and Association

Rates, rations and proportions; measures of morbidity (incidence, prevalence); measures of mortality; relative risk; absolute risk; attributable risk; odds ratio; causation; causal and non-causal relationships; sources of epidemiological data (census, vital statistics/registration systems, health service records [health information sources], morbidity and mortality surveys, demographic and health survey)

UNIT CODE: DHR3111 EPIDEMIOLOGY III (40 HOURS)

1: disease Surveillance and Outbreak Investigations

Definitions; types of epidemics; detection of epidemics; investigation of epidemics/outbreak; control of epidemics (definition, types of surveillance, purpose of surveillance, components of surveillance, sources of surveillance data, steps in surveillance, strategy in disease surveillance); Integrated Disease Surveillance and Response (IDSR)

2: Epidemiology Data and Study Designs

Sources of epidemiological data; experimental studies; observational studies; descriptive studies; analytical studies; cross-sectional studies; longitudinal studies; case-control studies

3: Principles of Disease Measurements

Reliability; observer variation; subject variation; variability; test bias and confounding; error and systematic error; repeatability; validity (content, concurrent, predictive, and construct); sensitivity and Specificity

TEACHING METHODOLOGY

- Lectures
- Group discussions
- Demonstration
- Assignments

ASSESSMENT METHODS

- CATs
- Take-away assignments
- End-of-semester examination

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

12. MODULE TITLE: MEDICAL DEMOGRAPHY

TIME 60 HOURS **6 CREDITS**

The module is designed to equip the learner with the knowledge and skills for collection, analysis, interpretation, presentation and dissemination of health demographic information

UNITS		HOURS
UNIT 1	Introduction and Concepts of Demography	20
UNIT 2	Population measures	20
UNIT 3	Fertility & Mortality Measures	40
UNIT 4:	Construction of life tables	30

MODULE OUTCOMES

At the end of the module, the learner will be able to:

1. Apply the concepts of demography
2. Demonstrate understanding of the characteristics of population composition
3. Demonstrate techniques of standardizing mortality and fertility measures
4. Demonstrate techniques uses in working out life expectancies of various age groups

MODULE CONTENT

UNIT CODE: DHR2112 - MEDICAL DEMOGRAPHY I 40HRS

The module is designed to equip the learner with the knowledge and skills for collection, analysis, interpretation, presentation and dissemination of health demographic information

UNITS		HOURS
UNIT 1	**Introduction and Concepts of Demography**	**20 HOURS**

Description of demography, introduction to demography, definition of demography, definition of population studies, measures in demography, rates, ratios, proportions, importance and uses of demographic data, sources of demographic data, census, registration, demographic health surveys, sample surveys, other sources, population growth and policies related to socio-economic development, population growth, definition of population, population growth, population census, factors and effects

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

of population growth, population studies, definition of sex composition, determinants of sex composition, calculations of sex ration, definition of age composition , determinants of age composition, calculation of the age dependency ration, measures of age, population policies

20 HOURS

UNIT 2 Population measures

Definition, Population census, Population growth, Factors and effects of population growth, Population control, demographic transition theories, sex composition, Determinants of sex composition, Calculations of sex ratio, age composition, Determinants of age composition, Calculation of the age dependency ratio, Measures of age, Population Pyramids

UNIT CODE: DHR2212 - MEDICAL DEMOGRAPHY II 40HRS

Fertility and Mortality Measures 40 HOURS

Description and analysis of fertility, explain fertility, description and calculations of measure of fertility, child woman ratio, Crude birth rate (CBR), General fertility rate (GFR), Age Specific fertility rate (ASFR), Total fertility rate (TFR), other Specific fertility rate (SFR), description and analysis of mortality, description of mortality, description of historical background/development of mortality measurement, description of mortality characterization, description and calculation of measures of mortality, Crude death rate, Age Specific death rate, Neonatal death rate, Infant mortality rate, Child mortality rate, Still birth, Case fatality rate, Maternal mortality rate

UNIT CODE: DHR3112 - MEDICAL DEMOGRAPHY III 20HRS

UNIT 4: Construction of life tables 20

1: Life tables

Construction of life tables

TEACHING METHODOLOGY

- Lectures
- Group discussions
- Demonstration
- Assignments

ASSESSMENT METHODS

- CATs

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

- Take-away assignments
- End-of-semester exam

13. MODULE TITLE: RESEARCH METHODOLOGY

TIME: 60 HOURS **6 CREDITS**

MODULE COMPETENCE

This course is designed to equip the learner with the necessary knowledge, skills, and attitudes in research methodology to enable him/her to participate in or carry out research related to health care and community

UNITS		**HOURS**
UNIT 1	Introduction to Research	10
	Identification of a Statistical/Research Problem	10
UNIT 2	Research Design/Methodology	20
UNIT 3	Findings, Discussions, and Recommendations	10
	Report Writing/Documentation	10

MODULE OUTCOMES

At the end of the module the learner will be able to:

1. Describe research and its contribution toward solving priority problems in health care
2. Designed and carry out research

MODULE CONTENT

UNIT CODE; DHR2113 RESEARCH METHODOLOGY

1: Introduction to Research

Definition of research; uses of research; types of research (experimental and non-experimental)

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Approaches to identifying a research problem; statement of the problem; justification; development of objectives; research questions/hypothesis; review of literature; sources of information; citing references; research plan/proposal stage

2: Research Design/Methodology

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Research format and research design; description of sample and sampling techniques (probability and non-probability); study area; population and sub-populations; variables

Ethical considerations; inclusion exclusion criterion; construction of research instrument; pilot survey; pre-testing; actual data collection

UNIT CODE; DHR3220 RESEARCH PROJECT

PRACTICUM

Design and carry out research in the field

UNIT 3: Findings, Discussions, and Recommendations

Data cleaning and classification; data processing and analysis; discussions and recommendations

Report Writing /Documentation

Format; steps

TEACHING METHODOLOGY

Lectures

Group discussions/group work

Self-directed learning

ASSESSMENT METHODS

CATs, quizzes, assignments written reports/dissertation

End of semester exam (multiple choices and essay questions)

14. MODULE TITLE: HUMAN PSYCHOLOGY

TIME: 30 HOURS **3 CREDITS**

MODULE COMPETENCE

This module is designed to equip the learner with the knowledge, skills, and attitudes necessary to

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

provide services at the health care facility and community level.

UNIT		HOURS
UNIT 1	Introduction to Psychology	02
UNIT 2	Human growth and development	04
UNIT 3	Bio psychological Processes	04
UNIT 4	Cognitive Psychology	02
UNIT 5	Motivation and Emotions	04
UNIT 6	Personality	04
UNIT 7	Psychology and Health	02
UNIT 8	Social Psychology	04
UNIT 9	Abnormal Psychology and Therapeutic Approaches	04

MODULE OUTCOMES

At the end of the module, the learner will be able to:

5. Apply psychological principles in understanding human behavior
6. Demonstrate understanding of the human lifespan development and its influence on health
7. Appreciate the different psychological and personality influences on health and health care delivery
8. Apply learned knowledge, attitude and skills in therapeutic approaches to health care

MODULE CONTENT

UNIT CODE: DHR2214 HUMAN PSYCHOLOGY

1: Introduction to Psychology

Concepts and principles; historical background; goals of psychology; methods used in studying psychology; branches; relevance of psychology in medical practice system; human growth and development; hereditary and the environment; prenatal development (germinal, embryonic, fetal stages); infant and child development (physical, perceptual, cognitive, psychosocial); adolescent development (physical, cognitive, psychosocial); adulthood (physical, cognitive, psychosocial, ageing, death and dying)

market penetration and brand image and marketing mix; advertising

18. MODULE TITLE: FIRST AID & EMERGENCY MEDICINE

TIME: 30 HOURS **3 CREDITS**

MODULE COMPETENCE

This module is designated to enable the learner to apply first aid knowledge and skills.

UNITS		**HOURS**
UNITS 1	Introduction, concept and Practice of First Aid	02
UNIT 2	Human Body Systems, Respiration, Circulation and Resuscitation	04
UNIT 3	Conditions of First Aid Shock	06
UNIT 4	Fractures, Sprain, Burns, Scalds, and Poisoning	06
UNIT 5	Dressings and Bandages	06
UNIT 6	Casualty Incident management and Lifting and Carrying Casualties	06

MODULE OUTCOMES

At the end of the module the learner will be able to:

1. Understand what a first aider is expected to do in emergency circumstances
2. Institute a Plan of Action to manage incidents
3. Distinguish between incident management and casualty management

MODULE CONTENT

The application of first aid knowledge and skills in assessment, diagnosis, and management of casualties in emergency situations

UNIT CODE; CCU 1104 FIRST AID & EMERGENCY MEDICINE

1: Introduction, Concept, and Practice of First Aid

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

Definition of first aid; principles of first aid; scope, practice, and aim of first aid; determining diagnosis through DRABC, AMEGA, and procedure of examination; characteristics of a good first aider; attitudes of a good first aider and application

2: Human Boy Systems, Respiration, Circulation and Resuscitation

Statement of the human body systems and organs theirn (*also refer to Anatomy and Physiology objectives*); definition of resuscitation; description of mechanism of respiration; conditions of respiratory system, their causes, and management; description of mechanism of circulation; conditions of the circulatory system, causes, and management; organs forming the circulatory system; recognition of: pulse rate, temperature level, wounds, bleeding and breathing rates, application of skills in controlling internal and external bleeding, swelling, and guarding against shock; types of resuscitation in adults and children: manual and electrical; various methods of respiration in adults: mouth to mouth, mouth to nose, mouth to mouth and nose, and mouth to stoma; various methods of respiration in children: mouth to mouth, mouth to mouth and nose, and mouth to stoma

3: Conditions of First Aid Shock

Definition; recognition, features, and management; shock; compression; concussion; confusion; fainting; frost bite; hyperthermia

4: Fractures, Sprains, Burns, Scalds, and Poisoning

Definition of fractures; dislocation; sprains and strains; sign and symptoms of fractures; types of fractures (open and closed fractures); management of sprained or torn muscles and ligaments and fractures; definition and types of burns; signs and symptoms of burns, scalds and poisoning; management of burns, scalds, and poisoning

5: Dressings and Bandages

Definition of a dressing and bandage; description of triangular and roller bandages; application of a dressing; functions of a dressing; application of roller and triangular bandages

This document is available on studocu

Downloaded by Patrick Ngobiro (pngobiro@gmail.com)

6: Casualty Incident Management and Lifting and Carrying Casualties

Definition and management of incidents; Practical session; recovery position types; systematic steps; ode of seeking help; messages ato ambulance crew and computation of casualty handing-over message; application of lifting and carrying casualty methods and procedures; methods involving one first aider

(human crutch, drag method, fireman's lift, pick-back); methods involving multiple first aiders (four-handed seat, fireman's lift, cradle, two-handed seat, chair lift); stretcher-dressing, loading, lifting, and loading casualties into an ambulance

TEACHING METHODOLOGY

- Lecture
- Focus group discussion
- Application exercise and practices in a classroom
- Assignments
- Independent study
- Off-and on-the-job training integrated
- Paying visits and attachments to health facilities

ASSESSMENT METHODS

- Theory paper examination
- Multiple choice questions
- Matching variable statements
- True or false answer questions
- Essay questions
- Practical examination
- OSPEs
- Demonstration
