KMTC/QP-08/EPS

KENYA MEDICAL TRAINING COLLEGE
FACULTY OF NURSING
DEPARTMENT OF NURSING

FINAL QUALIFYING EXAMINATION
FOR
DIPLOMA IN COMMUNITY HEALTH NURSING

PAPER: MEDICAL-SURGICAL NURSING

DATE: 21st January 2020 **TIME: 3 HOURS (9:00AM – 12:00 NOON)**

INSTRUCTIONS

1. This paper consists of:
   - Section 1 (40 Multiple Choice Questions)
   - Section 2 (8 Short Answer Questions)
   - Section 3 (1 Long Answer Question)
2. Attempt **ALL** Questions
3. Write the EXAMINATION **NUMBER** given on all the answer sheets provided and on the question paper.
4. Ensure that all examination answer scripts are handed in at the end of the examination
5. Ensure you sign the examination register provided

EXAMINATION NUMBER .....

SECTION 1

MULTIPLE CHOICE QUESTIONS (40 MARKS)

1. The ethical principal in Nursing that implies to the duty to do good and active promotion of benovelence is
   a) Autonomy
   b) Beneficence
   c) Non maleficence
   d) Fidelity
2. Determination of the patient's response to nursing intervention is done during
   a) Planning
   b) Evaluation
   c) Diagnosing
   d) Implementation
3. During physical assessment of a patient pain may be elicited by
   a) Client verbalization, elevated pulse rate
   b) Guarding behavior, elevated blood pressure
   c) Guarding behavior, client verbalization
   d) Elevated pulse rate, client verbalization
4. Factors associated to potential nutritional deficit in a patient with appendicitis awaiting to go to surgery include:
   a) Nausea and vomiting, medications
   b) Pain, nausea and vomiting
   c) Tube feeding, medications
   d) Anorexia, wound drainage
5. After removal of a plaster cast in a limb, the patient is likely to have
   a) Atrophy
   b) Hyperplasia
   c) Dysplasia
   d) Hypertrophy
6. A disorder where there is history of multiple generations with similar disorder is
   a) Autosomal dominant inheritance
   b) Autosomal close inheritance
   c) Autosomal recessive inheritance
   d) Autosomal genetic inheritance

7. To identify valvular and ventricular functions and structures, the most commonly used investigation is
   a) E.E.G (Elecro- encephalogram)
   b) E.C.T (Elecro-convulsive therapy)
   c) E.C. G (Electro cardiogram)
   d) Echocardiogram
8. Which of the following factors can increase serum osmolarity
   a) Renal failure
   b) Diuretic use
   c) Adrenal insufficiency
   d) Uraemia
9. A patient re-admitted to the ward with preventable complications of diabetes mellitus has the following nursing diagnosis
   a) Pain related to trauma
   b) Risk for altered skin integrity
   c) Nutrition imbalance, less than body requirements
   d) Knowledge deficient
10. In choosing a site for venipuncture, the nurse will consider
   a) Conditions of vein, duration of therapy
   b) Patients age and size, condition of canula
   c) Skill of person performing, time of the day
   d) Whether patient is right or left handed, skill of patient
11. Advantages of crystalloids in treatment of shock is
   a) Cannot cause pulmonary oedema
   b) Cannot cause hypernatremia
   c) Area cheap and widely available
   d) Rapidly expand plasma volume
12. Cardiac tamponade is the
   a) Accumulation of fluid in the pericardium
   b) Compression of the heart by fluid in the pericardial sac
   c) Accumulation of fluid in the endocardium
   d) Compression of the heart by fluid in the pleural cavity
13. Risk factors for chronic obstructive air disease include
   a) Tobacco smoking, genetic, nutritional deficiencies
   b) Passive smoking, ambient air pollution, nutritional deficiency
   c) Occupational exposure, ambient air pollution, passive smoking
   d) Passive smoking, alpha protease deficiency, ambient air pollution

14. In measurement of blood pressure
    a) Cuff bladder is centred on radial artery
    b) Caliberation of blood pressure machine should be done monthly
    c) Palpation of systolic pressure is done by hand
    d) Cuff size must be appropriate for patient
15. Lidocaine used intravenously is indicated for:
    a) Local anaelgesic
    b) Antirrhythimic
    c) Muscle relaxant
    d) Severe pain
16. Streptococcal infections can complicate to
    a) Sore throat
    b) Endocarditis
    c) Sepsis
    d) Septicaemia
17. Digoxin toxicity may be indicated by
    a) Fatique, depression
    b) Nausea, fever
    c) Tarchycardia, fever
    d) Restlessness, anorexia
18. Cardiopulmonary resuscitation is done using
    a) Oxygen, Adrenalin, 50% Dextrose
    b) Atropine, Adrenalin, 50% Dextrose
    c) Oxygen, Adrenalin, Atropine
    d) Vasopressin, 50% Dextrose, Adrenalin
19. Risk factors for deep venous thrombosis include
    a) Endothelial Damage, Venous Stasis, Pregnancy
    b) Age Below 50 Years, Obesity, Venous Stasis
    c) Exercise, Surgery, Venous Stasis
    d) Low Body Weight, Venous Stasis, Pregnancy
20. Modifiable factors that may lead to hypertension include
    a) Obesity, Age, Diet
    b) Smoking, Diet, Genetics
    c) Sodium Intake, Genetics, Obesity
    d) Diet, Obesity, Smoking
21. A patient with sickle cell anaemia will have the following nursing diagnosis
    a) Acute pain related to tissue damage
    b) Risk for infection
    c) Anxiety related to low haemoglobin
    d) Non-compliance related to pain

22. The digestive enzyme ptyalin is produced by
   a) Pancreas
   b) Intestinal mucosa
   c) Liver
   d) Salivary glands

23. Referred pain on the right shoulder is likely to be
   a) Liver or duodenal problem
   b) Rectal lesions and cardiac problem
   c) Pancreatis, appendicitis
   d) Biliary colic, cardiac problem

24. A nursing diagnosis of impaired urinary elimination may be evidenced by
   a) Recurrent urinary tract infections
   b) Request for a urinal or bed pan
   c) Taking a lot of fluids
   d) No drinking enough fluids

25. In order to confirm if a nasal-gastric tube is in the stomach, the nurse will
   a) Use a litmus paper to test the PH of mouth contents
   b) Use a stethoscope and listen for heart sounds
   c) Aspirate the contents before feeding and check if they contain food remains
   d) Put the tube end in a bowl of water and check for bubble

26. While nursing a patient with a colostomy, the nurse will maintain skin integrity by
   a) Applying skin barrier on the colostomy bag
   b) Changing the pouch only when full
   c) Teaching the patient to identify signs of irritation
   d) Dressing the pressure sore asceptically

27. Which of the following are functions of the liver?
   a) Vitamin metabolism, bile formation, fat metabolism
   b) Protein metabolism, glucose metabolism, vitamin storage
   c) Ammonia conversion, bile formation, fat metabolism
   d) Bile storage, fat metabolism, protein metabolism

28. The possible complications after cholecystogram include
   a) Pain at the injection site
   b) Exposure to radiation
   c) Vomiting as tube is inserted
   d) Bleeding

29. A patient with hyperparathyroidism will present with
   a) Kidney stones, muscle weakness, bulging eyes
   b) Pancreatitis, vomiting, flushed skin
   c) Rapid pulse, pancreatitis, kidney stones
   d) Kidney stones, muscle weakness, pancreatitis

30. Excessive use of corticosteroid medications is likely to cause
   a) Down's syndrome
   b) Korsakoff's syndrome
   c) Cushing's syndrome
   d) Nephrotic syndrome

31. A male patient who presents with vague discomfort, feeling fullness in the perineum and vague back pain could be suffering from
   a) Kidney disease
   b) Urethral discharge
   c) Bladder disease
   d) Prostrate infection

32. Urine that is colourless or pale yellow could indicate
   a) Excess fluid intake, diabetes insipidus
   b) Dehydration, diabetes mellitus
   c) Overhydration, infection
   d) Pyuria, dehydration

33. In an action potential, the influx of Na+ in the cell is by
   a) Sodium potassium pump
   b) Osmosis
   c) Sodium gated channel
   d) Neurotransmitters

34. Partial thickness burn involves
   a) Epidermis and portion of dermis
   b) Epidermis and dermis
   c) Epidermis and subcutaneous tissue
   d) Dermis and subcutaneous tissue

35. Using the rule of nines, a patient (adult) with complete burn on the upper limb and lower limb has
   a) 27% burn
   b) 36% burn
   c) 18% burn
   d) 45% burn

36. Risk factors for development of cataract include
   a) Aging, cigarette smoking, low body weight
   b) Obesity, trauma, young age
   c) Diabetes mellitus, malnutrition, trauma
   d) Young age, renal disorder, diabetes mellitus

37. Tympanoplasty is indicated in
   a) Otitis media, trauma or middle ear
   b) Otitis external, cerumen impaction
   c) Foreign bodies, otitis media
   d) Trauma of the middle ear, otitis external
38. In cerebral vascular accident, stroke can be caused by
   a) Aneurism
   b) Arteriovenous occlusions
   c) Drug use
   d) Infarcts
39. A head injury where the brain is bruised is called
   a) Concussion
   b) Diffuse axonal injury
   c) Cerebral vascular accident
   d) Confusion
40. A patient with a Glasgow coma scale score of 15 is said to be
   a) In deep coma
   b) Semi-conscious
   c) Confused
   d) Normal

SHORT ANSWER QUESTIONS (40 MARKS)

1. State FIVE local factors at the site of fracture that affect bone healing — 5 marks
2. On gentamicin, state — 2 marks
   a) Mode of action — 1 mark
   b) Contra indications — 2 marks
   c) Drug interaction — 6 marks
3. Explain the THREE stages in the pathophysiology of chronic renal disease — 6 marks
4. Draw and label a frontal section of the skull showing flow of cerebral spinal fluid — 3 marks
5. Outline THREE functions of insulin in the body — 4 marks
6. State FOUR goals in the nursing management of a patient in sickle cell crisis — 5 marks
7. Outline FIVE factors that can lead to disseminated intravascular coagulopathy — 6 marks
8. State FOUR actions to prevent anaphylaxis

LONG ANSWER QUESTION (20 MARKS)

1. A 48 year old male patient is admitted in the surgical wared with cancer of the colon.
   a) Outline FIVE agents or factors relating to carcinogenesis — 5 marks
   b) State THREE imaging tests used to detect cancer — 3 marks
   c) Describe the management if this patient until discharge — 12 marks
